Bayes Institute: *Become More*

1. Thesis

This thesis is built on direct experience in the Indian education industry, having observed operations and public response across edtech institutions since COVID-19.

1.1. Education as Insurance

In India, people don't buy education. They buy insurance. And this truth dictates how educational institutions must be built.

A parent does not pay for a video lecture because the lecture is beautifully made. A student does not buy a course because the curriculum is elegant. A working professional does not buy a platform access because it has good practice problems. **They pay because they want their future to move.** Their child may get into a better school, clear an exam, get a job, earn a promotion, switch careers, migrate, or stop feeling left behind. Sometimes they move toward ambition. Sometimes they move away from fear, embarrassment, or stagnation.

Education in India is rarely purchased out of curiosity alone. It is purchased as movement, one rung up, away from shame.

1.2. Entering Through the Wound

If the product does not sit next to real anxiety, it becomes a vitamin in a market that mostly pays for painkillers.

Upskilling is not a market. A 24-year-old engineer in Pune who wants to transition into product engineering without quitting his job is a market. Better communication is not a market. A first-generation graduate who freezes in customer interviews because she lacks professional confidence is a market. **India is too large to enter horizontally. You enter through a wound.**

The first question is not what we teach. It is whose anxiety we are willing to be accountable to. The answer must be narrow enough that the learner recognizes himself in it, painful enough that he makes dedicated time for it, and honest enough that we can deliver visible transformation.

1.3. Market Truths

The market truths dictate why learners buy and how institutions survive.

S.No.	Truth	What It Means	Founder Implication
1.3.1.	**Education is bought as insurance**	Learners pay for a change in future odds: admission, employment, promotion, confidence, mobility, status, or respect. Content matters only when it supports a believable transformation.	**Start with the anxiety, not with the syllabus.** Every offer must answer what becomes possible after this and what was not possible before.
1.3.2.	**Trust is the product**	The last edtech cycle taught people to distrust false urgency, hidden financing, inflated outcomes, and placement claims that sounded stronger than evidence.	**Build proof before pressure.** Public teaching, transparent pricing, visible student work, clear policies, honest claims, and the founder presence are not marketing extras. They are the trust infrastructure.
1.3.3.	**Distribution opens the door, but outcomes keep it open**	A brilliant program that nobody discovers has no impact, but attention alone does not compound. Over time, institutions survive only if learners improve and tell others.	**Learn to earn attention without lying.** Early cohorts may come through distribution. However, later cohorts should increasingly come through outcomes, referrals, reputation, and a repeatable learning system.

1.4. Product Principles

The product principles tell us what kind of institutions they may trust enough to stay with.

S.No.	Product Principle	What It Means	Founder Implication
1.4.1.	**The teacher cannot be abstracted away**	A good teacher is not merely a person delivering transformation. The teacher interprets, motivates, corrects, challenges, reassures, and holds the learner accountable. AI can explain concepts, but explanation is only one part of the learning.	**Use technology to make a trusted teacher far more effective** through diagnostics, doubt triage, practice generation, feedback, revision loops, and cohort tracking. **Do not confuse automated answers with human authority.**
1.4.2.	**Trust needs a visible form**	Pure online delivery may be operationally elegant, but rituals make them feel committed in the curriculum.	Being found online first and asset-light is good, but create visible proof points through office hours, meetups, local circles, retreats, demo days, and community rituals.

S.No.	Product Principle	What It Means	Founder Implication
			Hybrid is not a failure of online. It is the way trust takes shape.
1.4.3.	**Price is part of pedagogy**	If the price is too high, learners demand miracles. If the price is too low, they may not take the commitment seriously. If it is confusing, they may suspect it as a trap.	Keeping the price legible, modular, and honest. **The price should increase commitment without manufacturing desperation.** Family debt should never become the engine of customer acquisition.
1.4.4.	**The buyer, the learner, and the beneficiary may differ**	A parent may pay, a student may learn, and the entire family may benefit from the result. Even when an adult pays for himself, spouses, employers, and families can take a decision-making step in that.	**The learner needs dignity and momentum. The payer needs clarity and trust. The beneficiary needs visible progress.** If one side is ignored, the relationship eventually breaks.
1.4.5.	**Cohort size changes the product**	A cohort of 50 and a cohort of 5,000 are not the same experience at different scales. Attention, feedback, motivation, and accountability decay unless the system changes.	**Select before scaling.** Early cohorts should be chosen not only for talent but for effort, curiosity, seriousness, and available time. Do not admit people the current system cannot help yet.

1.5. Founder Proximity

These principles may look strategic, but their foundation is emotional, and **an education company cannot be built from founder's distance.** Especially in the beginning, the founder is a part of the promise. Learners who want to know who is teaching, why they should trust that person, and what that person helped others make possible. This may be uncomfortable for the founder who wants the product to speak for itself, but **early in education, this product includes the person making the promise. The founder has to remain close to classes, calls, doubts, drop-offs, failures, and wins. Otherwise, the company slowly becomes a funnel attached to a syllabus.**

1.6. The Shape of the Institute

The Indian education market is vast. Focus is essential for survival.

1.6.1. Exclusions

- **Bayes will not begin with K-12.** That requires selling to parents, understanding child psychology, working with school rhythms, and building trust at a family level. It's a different company altogether.
- **Bayes will not begin by granting degrees.** Degrees are a regulated, capital-intensive, institution-heavy business. Starting there would turn the company into a college before it has proved that it can teach.
- **Bayes will also not promise placements.** Career progress matters, but "we will get you placed" is a promise no institution fully controls. It encourages poor-fit admissions, Exaggerated claims, employer dependence, and sales language that becomes more confident than the product.

Bayes should be accountable for what it can control: the quality of teaching practice, feedback, exposure standards, network, and evidence of learner progress.

1.6.2. The Time Constraint

Most learners do not have the fantasy version of time. A college student may spend the day in class, travel, family obligations, and the ordinary chaos of college life. A working professional may spend the day in a job he already dislikes, then arrives at learning with depleted attention.

The Bayes Fellow is not the average learner. We select for people who can carve out dedicated time and treat the fellowship like a second job. The program delivers **200 guided live hours** across 40 weeks — 5 hours of structured live instruction, critique, and feedback per week. The building, selling, and market experimentation happen on top of that, in the hours the fellow owns. That is the commitment Bayes demands and that selection screens for.

1.6.3. Entry Market Constraints

The entry market satisfies strict operational constraints:

1. Adult technical learners (ages 21 to 30), not K-12.
2. Asset-light hybrid model with minimal capital burn.
3. Live instruction combined with rigorous human accountability.
4. Zero placement promises, zero NBFC loan traps, and zero equity dilution.
5. Visible transformation within 200 live hours of effort.
6. Target an anxiety acute enough that learners preserve dedicated weekly time.

1.6.4. The Narrow Door

The temptation in EdTech is to make the door wider because the market is large. But large markets punish weak products. **A narrow wedge is not lack of ambition, it's the only sane way to discover whether the company has the real right to exist.**

The first anxiety Bayes addresses is **entrepreneurial paralysis**. A growing population of ambitious Indian software engineers want to build independent software products but lack a clear path between passive tutorials and reckless full-time job resignation. This is the wound Bayes enters through.

---

2. Problem Statement and the Bayes Promise

2.1. The Problem Statement

AI has dramatically lowered the cost of generating code. Today, an ambitious software developer can build web applications, API endpoints, and landing pages in days. However, **most aspiring software founders still fail to reach a paying user.**

Aspiring technical builders face imperfect alternatives:

1. **Content and Courses:** Teach technical concepts but cannot instill market execution or commercial courage.
2. **Online Communities:** Provide motivation but lack rigorous accountability.
3. **Hackathons:** Yield weekend prototypes but rarely customer truth or revenue.
4. **Accelerators:** Focus on venture-scale startups that already have traction, co-founders, and full-time commitment.

Consequently, the builder is caught between two possible regrets:

1. **The fear of remaining a spectator:** Spending years preparing for the next job, watching others build, and wondering if they were capable of creating something of their own.
2. **The fear of making the reckless leap:** Quitting a stable job, spending a year on the wrong idea, losing professional momentum, or mistaking activity for progress because they built a prototype.

Building something viable takes more than this, and this is the problem that the Bayes Institute will solve.

2.2. A Bird’s Eye View of the Solution

2.2.1. The Target Learner

The target learner is aged 21 to 30: software engineers, product developers, and STEM graduates based in regional tech hubs like Mumbai and Pune. They possess technical building ability but lack customer discovery and commercial sales discipline.

2.2.2. Three Core Capabilities

1. **Judgment (Decisions Under Uncertainty):** Founders must repeatedly decide what to build, whom to serve, which feedback to trust, what is good enough, when to persist, and when to pivot or stop. **Judgment is not the ability to have a good idea. It is the ability to make sound trade-offs, choose the right solution for the moment, and update quickly when reality disagrees.** Great founders are not right at every step; they are simply less wrong, less expensively wrong, and correct themselves faster.
2. **Insight (Seeing What Others Miss):** Good judgment requires access to reality. Valuable opportunities emerge from deep exposure to industry workflows, incentives, customers, and recurring frustrations. First-time founders often lack the domain depth and customer proximity needed to recognize expensive inefficiencies and urgent budgets. **Without insight, founders begin with abstract ideas. With insight, they begin with problems the market is already trying to solve.**
3. **Distribution (Turning Product into Demand):** A genuine problem and a capable product do not automatically become a business. Engineering education and jobs teach people how to build within existing systems, not how to create demand from zero. Positioning, pricing, and sales are often treated as post-product activities. However, **distribution is a part of discovery. Trying to sell reveals who cares, what they value, and whether the problem matters enough for them to pay.**

2.2.3. Two Enabling Conditions

Developing these capabilities requires two environmental conditions:

1. **A High-Agency Ecosystem (Where Ambition Compounds):** Judgment, insight, and distribution are difficult to develop in isolation. Building alone makes procrastination easy, standards weak, and self-deception hard to detect. A dense network of ambitious peers, operators, mentors, and customers creates accountability, faster learning, and the pressure to ship. **The value of an ecosystem extends far beyond capital and talent. The environment changes what people believe is possible and what level of action feels normal.**
2. **Affordable Experimentation (Reducing the Cost of Truth):** Entrepreneurship always involves uncertainty. The real problem is how expensive that uncertainty becomes before the founder learns anything useful. Aspiring founders need a serious but bounded first attempt. **The goal is not to make entrepreneurship safe, but to make experimentation affordable without making it casual.**

2.2.4. Bounded Attempt, Bounded Regret

This is a product people can pay for because it buys more than a startup attempt: **it buys entrepreneurial opportunity.** The learner is not purchasing a guarantee of success. They are developing an enduring ability to identify opportunities, make decisions under uncertainty, build serious products, speak with users, create distribution, and learn from evidence.

The transformation is not discovering whether they are “founder material.” **It is becoming someone for whom building is no longer mysterious, distant, and dependent on a reckless leap.** If the first idea fails, these capabilities compound into every attempt that follows. Even if a participant continues their job, they know how to act when the right opportunity appears.

We do not measure success only by venture-backed startups. If a participant uses these capabilities to earn independently or build a profitable side hustle, the loop is closed.

2.3. The Bayes Institute & The Bayes Founder Fellowship

Bayes Institute is **the missing institution between wanting to start a company and being ready to commit to one.** We help technically capable people acquire industry insight, founder judgment, product discipline, and commercial courage before they deorganize their lives around an untested idea.

The primary vehicle for this is *The Bayes Founder Fellowship*, a selective, 40-week hybrid program built around learning through action.

2.3.1. Cohort One Admissions and Focus

For the inaugural cohort, admissions are deliberately premium and restricted geographically to **Mumbai and Pune** to ensure deep offline community density.

- **Target Profiles:**
  - *Software and Product Engineers:* Early working professionals at product startups or technology companies, ideally with some years of experience. We do not primary-target service-based candidates with lower packages (3-6 LPA), not as a judgment of their potential, but because cohort-one focus requires high practical systems ability, risk capacity, and financial breathing room.
  - *Final-Year Students:* Ambitious engineering students from top-tier local colleges in Mumbai and Pune who are on track for product careers.
  - *STEM Graduates:* Technically strong graduates who can master engineering systems quickly and demonstrate unusual seriousness.
- **The Selection Bar:** Bayes does not teach coding from scratch or select via DSA whiteboard tests. We select for **practical systems competence**: the ability to connect database servers, frontends, APIs, logs, deployment systems, and live URLs along alongside:
  - Agency under imperfect conditions.
  - Curiosity around a domain without attachment to a pre-decided solution.
  - Willingness to contact users and accept discomforting evidence.
  - A protected weekly time budget and the stability to sustain a 40-week program.

Note: Ability to pay is assessed separately from the ability to succeed. A service-firm engineer who passes the practical bar will not be rejected due to their salary label, nor will a prestigious candidate who avoids users be admitted.

2.3.2. Graduation Standards

To graduate, a participant must place a real bet on the outcome and document it. We call our fellows **Bayesians** because they are trained to **form beliefs, test them against reality, and update when the evidence changes.**

The graduation standard requires:

1. **Verified Bank-Transfer Revenue:** A minimum of **2 paying B2B customers** or **₹40,000 ($500) in collected commercial revenue** via payment gateways or direct bank transfer.
2. A documented Bayesian decision memo detailing market evidence and the 90-day operational roadmap (scale, narrow, pivot, or stop).

2.3.3. Program Economics

- **Pricing:** A nominal anchor price of **2.5 lakhs**: a ₹5,000 seat deposit credited against the first installment, a first net installment of ₹36,665, and five subsequent monthly installments of ₹41,667. The remaining 14 weeks of execution are included at no additional cost.
- **Scholarships:** Variable scholarships are available based on caliber, financial need, and cohort economics.
- **Equity: Bayes takes zero equity** during the program.

3. The Bayes Operating Model

Bayes begins as a lean institution. Even when run by a small team, the work must be structured and executed with institutional discipline from day one. The operating model is organized around five core functions that spell the acronym **BAYES**.

3.1. The BAYES Functional Model

Letter	Function	Core Question	Areas of Ownership
B	**Brand & Growth**	Why would anyone want to become a Bayesian?	Demand generation, positioning, distribution, admissions, and trust infrastructure.
A	**Academics & Research**	How does Bayes create exceptional founders?	Curriculum design, pedagogy, project standards, proof of learning, and cohort outcomes.

Letter	Function	Core Question	Areas of Ownership
Y	**Youth & Community**	What does it feel like to be a Bayesian?	Culture, rituals, cohort energy, community bonding, alumni relations, and events.
E	**Engineering & Technology**	How does Bayes become superhumanly efficient?	Internal systems, CRM, AI leverage, automated tracking, and learning infrastructure.
S	**Strategy & Operations**	How does Bayes endure and move forward?	Vision, cohort economics, unit pricing, legal & compliance, partnerships, and scaling discipline.

Brand creates demand, academics creates capability, youth creates belonging, engineering creates leverage, and strategy creates endurance. If brand overpromises, academics inherits disappointment. If academics is weak, the community becomes theater. If community is weak, hard work becomes lonely. If engineering is weak, a small team drowns in operations. If strategy is weak, the institution confuses motion with progress. All five must function in balance.

3.2. Deep Dive: The Five Functions

3.2.1. Brand & Growth (B)

This function owns the public promise of Bayes. The core question is why a serious, ambitious person would trust Bayes with 40 weeks of effort, money, and identity. This function must earn attention without replicating the aggressive sales patterns of the last edtech cycle.

- **Ownership:** Positioning narrative, founder-led storytelling, social media content, partnerships, referrals, campus outreach, webinars, communities, paid growth, and the complete admission funnel (selectivity, scholarships, conversions, and applicant communication).
- **Standard of Success: Qualified demand.** The right applicant must understand the transformation, believe the proof, respect the selectivity, and know exactly what Bayes will and will not promise.

3.2.2. Academics & Research (A)

This function owns the learning engine. It answers how ambition becomes capability. The answer cannot be a syllabus alone; it must be a pedagogical system defining what participants learn, in what sequence, through what projects, with what feedback, and against what standard.

- **Ownership:** Learning philosophy, curriculum design, capability maps, industry tracks, project design, cohort experience, skill tracks, assignments, reviews, assessments, portfolios, demos, proof of work, graduation standards, instructor quality, and the research feedback loop.
- **Standard of Success: Visible founder capability.** A Bayesian must be able to identify a real problem, form a thesis, build a useful product, speak with users, test distribution, ask for money, reason about the business, and update from evidence.

3.2.3. Youth & Community (Y)

This function owns the felt experience of the fellows. Bayes is an environment where ambitious action feels normal. The community must generate the social energy, peer pressure, and belonging that prevent difficult work from becoming a private struggle.

- **Ownership:** Cohort culture, rituals, onboarding, social norms, peer groups, team dynamics, online spaces, offline events, hackathons, retreats, demo days, ceremonies, fireside chats, alumni engagement, merch, and mementos.
- **Standard of Success: Serious belonging.** Participants should feel selected, known, challenged, supported, and proud to be Bayesians.

3.2.4. Engineering & Technology (E)

This function owns institutional leverage. Bayes is designed to remain small but operate without team-size limitations. Software, automation, AI, and data must eliminate repetitive work, surface student signals early, and free the team to focus on teaching judgment and relationships.

- **Ownership:** CRM, admission pipelines, workflow tools, operational automations, AI co-pilots, learning experience systems, adaptive learning, AI tutoring, student analytics, progress tracking, skill graphs, and internal dashboards.
- **Standard of Success: Superhuman efficiency without impersonality.** Technology must make Bayes faster, sharper, and more attentive—not colder.

3.2.5. Strategy & Operations (S)

This function owns the institutional spine. It asks whether Bayes is becoming stronger after every cohort or merely busier. It protects the company from chasing distracted opportunities before the core institution is ready.

- **Ownership:** Strategic priorities, cohort economics (pricing, scholarships, floors), P&L, cash flow, legal, compliance, student terms, MoUs, HR, hiring, operating cadences, and scaling discipline.
- **Standard of Success: Durability.** Knowing what the institute can afford, what it can deliver, what it must refuse, and what must improve before the next cohort begins.

3.3. Interdependence and Cadence

The functions work in a continuous, iterative cycle:

- **Pre-Cohort Preparation:** Strategy sets the constraints, academics defines the learning promise, brand fills the funnel, youth designs the experience, and engineering prepares the systems.
- **Weekly Cohort Cadence:** The team reviews key operational indicators:
    1. Are we attracting the right people?
    2. Are students building real capability?
    3. Does the cohort have enough energy?
    4. Are systems reducing operational friction?
    5. Are we on track financially, legally, and operationally?
    6. Are learners moving towards evidence and revenue, or are they only producing founder theater?
- **Post-Cohort Loop:** Brand updates the proof, academics refines the curriculum, youth carries the cohort into alumni life, engineering fixes system bugs, and strategy decides the next bet.

The entire institute operates on a Bayesian philosophy: we continuously form beliefs about education, test them against cohort evidence, and update our operating model after every cycle.

4. The Bayesian Journey

4.1. Candidate Discovery

This is the moment an aspiring founder first encounters the Bayes Institute.

But how? Early-stage distribution is not about marketing channels; it is about **systematically borrowing trust**. No one pays a ₹2.5 lakh fee because of a LinkedIn post or a flyer; they enroll because someone they already trust introduced them. Therefore, we ignore vanity metrics: website traffic, followers, and raw impressions are secondary. **We optimize entirely for conversations, not impressions.**

4.1.1. The WhatsApp Community (The Pre-Cohort Funnel)

Instead of forcing a linear checklist, we run a **private WhatsApp Community** to warm up cold leads (outbound, hackathons, scouts) and drive them to the website self-assessment.

- **Privacy Infrastructure:** To protect candidate contact info and prevent recruitment poaching or spam, the primary community is set up as a **WhatsApp Community Announcement Channel**. Members cannot see other participants or their phone numbers; only admins can.
- **The Welcome Protocol (Eliminating the Dead Zone):** The moment a candidate joins the community, they receive an automated auto-responder welcome message:
    - *Immediate Value:* Access to the founder's public tech essays, architecture critiques, and coding resources published online.
    - *Explicit Next Step: "Review the pinned resources, and fill out the 5-minute assessment to join Tuesday's live cohort."*
- **Channel Segmentation:**
    - *Admin-Only Broadcast Channel:* Used strictly to distribute resources, announce rituals, and release materials to the entire community.
    - *College-Specific & Niche Hacking Groups:* Isolated conversational subgroups (e.g., `Bayes @ VJTI`, `Bayes @ COEP`, `Bayes @ Professionals`). Access is restricted by university/professional affiliation rather than the assessment. Invite links are distributed by Scouts or during seminars, serving as a low-friction, high-comfort workspace for local peers. The website self-assessment remains the strict gate for direct founder diagnostics, Tuesday office hours, and final cohort admission.
- **The Single CTA Strategy:** To prevent decision paralysis and drop-offs, we present exactly one CTA based on candidate trust:
    - *Outbound & Organic Discovery:* Trust is low; completing an assessment is too high friction. The CTA is **Join the private WhatsApp Community** (near-zero friction).
    - *Warm/High-Intent Conversion:* Once leads are warmed up in the community, the CTA switches to the website: **"See if Bayes is right for you"** (the 5-minute readiness assessment).
- **Pre-Cohort Event & Rhythm Alignment:** We run two weekly group rituals inside the community. Crucially, **pre-cohort event timings align with the eventual program schedule** to self-select candidates available during core cohort hours:
    - *Tuesday Founder Briefing (7:00 PM - 9:00 PM):* Live group presentation and open Q&A dissecting Handbook details and cohort trajectory. Pre-qualifies availability for the program's weekday teaching slots (Mon/Wed/Fri 8:30 PM - 10:00 PM).
    - *Sunday Webinar Resource Release (8:30 PM - 9:30 PM):* Distribution of slides, architecture diagrams, and checklists from the Sunday Orientation Webinar. Mirrors the weekend execution check-ins.

4.1.2. The Intent CRM (The Living Map)

For early working professionals, we do not build a complex sales CRM. A simple Airtable or Google Sheet is sufficient. The core operational rule: **do not collect contacts; collect intent.**

Every conversation with a lead must conclude with structured profile data:

- **Timeline:** Are they planning to start a company in 6 months, 1 year, 3 years, or “someday”? (We prioritize the 6-month window).
- **Biggest Blocker:** What is stopping them? (e.g., Idea, Customers, Capital, Confidence, Time).
- **Execution History:** Have they shipped any product or code before?
- **Ritual Fit:** Would they attend the Sunday webinar?

This transforms our contact list into a **living map of entrepreneurial intent across Mumbai and Pune**. Rather than maintaining a static mailing list, we build a database of readiness. This map ensures future cohorts are easy to recruit, events are simple to fill, and new programs launch with pre-qualified demand because we know exactly who is ready, when they will act, and what holds them back.

4.1.3. Target Market 1: Final Year Engineering Students

Primary CTA: Direct all qualified candidates to join the private WhatsApp Community Announcement Channel (or their specific campus subgroup).

Engine & Trigger	Target	Core Psychology	Run of Show
1. Developer Club & Committee Backchannel (Priority 1 / Committee Backchannel) *Trigger:* Direct engagement with student-run developer and technical committees.	• Student-run developer societies (GDSC, coding societies, open-source clubs) and college committees. • Student club presidents and technical/cultural committee heads.	**Bypass slow HOD approvals** by leveraging the high operational autonomy of student committees and clubs, which have the authority to independently bring external speakers directly into classrooms, labs, or student halls.	The founder delivers a value-first 45-minute “Building Tech in the AI Era” seminar in club rooms or lab sessions. Following the seminar, all attendees are directed to join the private WhatsApp group.
2. Bayes Scouts (Priority 2 / Grassroots Infiltration) *Trigger:* Scouting campaign for active student organizers on locked-down campuses.	• Active student organizers (college/cultural committee heads, hackathon organizers, open-source contributors) on locked-down campuses.	Standard ambassadors are perceived as spammers. Scouts act as **elite curators**, gaining status by identifying top peer talent.	Scouts identify classmates who are actively building side projects or winning hackathons. These scouts are rewarded with premium Bayes merch, rather than cash, to maintain prestige. They then distribute invite links to add high-potential builders to the private WhatsApp group.
3. Value-First College Seminar (Priority 3 / Front-Door Access) *Trigger:* Official seminar campaigns targeting premium regional engineering hubs.	• Tier-1 and premium private engineering colleges in Pune/Mumbai. • Heads of Department (HODs) and Training & Placement Officers (TPOs). • *Filter:* Exclude colleges with annual tuition under ₹1L/year.	Do not pitch the program directly; advertising is ignored. **Deliver extreme value first** to build credibility and curiosity.	The founder delivers an intense, 45-minute unbranded academic career lecture focused on building tech in the AI era. The Bayes fellowship is introduced only in the final 5 minutes, and faculty are asked to recommend top student builders. All attendees are directed to join the private WhatsApp group.
4. Engineered Peer Virality (Priority 4 / Organic Loop) *Trigger:* Active student onboarding and community milestone markers.	• High-signal student leaders, committee heads, and scouts who are already group members.	Student builders are socially connected across regional hubs and naturally share access to elite circles to build peer social capital.	Student leaders and scouts are promoted to WhatsApp group admins and empowered to invite their peers directly. Referrers unlock premium perks or Bayes merch if the builders they refer successfully qualify for the program.
5. Hackathon Walkabout (Priority 5 / Direct Outreach) *Trigger:* Calendar events for regional developer hackathons.	• Active, hands-on developer builders participating in hackathons.	Sponsoring events is expensive and crowds you with corporate advertisers. **Walking the floor as an observer** builds peer-level trust.	The founder attends hackathons as an unannounced observer to talk technology with teams. Within 48 hours of the event, the founder sends a personalized message to high-potential teams, inviting them to the private WhatsApp group to participate in free weekly startup teardowns.

Engine & Trigger	Target	Core Psychology	Run of Show
6. Vetted Digital Community (Priority 6 / Inbound Pull) *Trigger:* Ongoing founder content publishing.	• Top-of-funnel visitors from Instagram/LinkedIn organic reach.	Public pages build reach; private groups convert commitment. A vetted, invite-only WhatsApp group creates **elite proximity status**.	The founder uses Instagram and LinkedIn for public storytelling, directing candidates to join the private WhatsApp group. The group invite link is never published publicly, but is shared via private DM in response to inbound interest.

4.1.4. Target Market 2: Early Working Professionals (Ages 22-30)

Primary CTA: Direct all qualified candidates to join the private WhatsApp Community Announcement Channel (or their specific niche subgroup).

Engine & Trigger	Target	Core Psychology	Run of Show
1. VJTI Alumni Network Activation (Priority 1 / Alumni Leverage) *Trigger:* Warm broadcast campaign in the official VJTI Alumni WhatsApp group.	• VJTI alumni (seniors, peers, and juniors) who are early-to-mid career working professionals in technical/product roles.	**Leveraging shared college pedigree** acts as an instant trust shortcut. Alumni are naturally inclined to support peer initiatives and seek opportunities to stay close to the local startup ecosystem.	The founder posts a personal message in the VJTI Alumni WhatsApp group, explaining the goal of building a weekend startup incubator for technical builders. Interested alumni are then provided with the private WhatsApp group link.
2. Professional Peer Referral Loop (Priority 2 / Warm Word of Mouth) *Trigger:* Manual referral campaigns targeting past colleagues, classmates, and office networks.	• Past colleagues, office friends, college classmates, and batchmates who are currently working professionals in tech.	Asking for the “most entrepreneurial engineer they know” shifts the screening effort to your trusted network. Peer recommendations pre-filter for high agency and capability.	The founder directly messages past coworkers and classmates to ask for introductions to the most entrepreneurial engineers in their network. Those introduced are invited to join the private WhatsApp group.
3. GitHub-to-LinkedIn Cold Outreach (Priority 3 / Project-First Prospecting) *Trigger:* Manual developer profiling campaigns (target: 30 profiles identified/day).	• Active developers based in Mumbai or Pune with >20 followers on GitHub. • **Strong Signals:** Recently updated/pushed repositories, pinned weekend projects, hackathon codebases, and AI/ML tools.	Outreach referencing their actual project feels highly custom, technical, and non-commercial.	After identifying active developers on GitHub, the founder sends a connection request on LinkedIn that references the developer’s specific project. The founder invites them to the private WhatsApp group if they show interest in taking their project further.
4. Devfolio Hackathon Scraping (Priority 4 / Hackathon Targeting) *Trigger:* Manual hackathon participant profiling campaigns.	• Participants, finalists, and winners of regional hackathons on Devfolio (themes: Mumbai/Pune, AI, Web/Web3, Fintech).	Recognizing hackathon achievements provides an authentic, high-status connection trigger.	The founder scrapes hackathon participant data and sends personalized connection requests to high-performing builders on LinkedIn, referencing their project success and inviting them to join the private WhatsApp community.
5. Local Technical Meetup Networking (Priority 5 / In-Person Conversion) *Trigger:* Calendar events for developer and AI/startup meetups in Mumbai/Pune.	• Early-stage builders, developers, and founders attending local tech, AI, Rust/Python, or startup meetups on Meetup.com.	In-person conversations build trust and rapport orders of magnitude faster. Sharing real technical interests face-to-face makes subsequent digital DMs feel natural.	The founder attends local tech meetups in Mumbai and Pune to network with potential builders. The founder follows up with those contacts within 24 hours via LinkedIn or WhatsApp to share the invitation link for the private community.

Engine & Trigger	Target	Core Psychology	Run of Show
6. LinkedIn Cold Outbound (Priority 6 / Targeted Cold Outbound) *Trigger:* Manual founder prospecting campaign (target: 100 messages/day).	• Software, product, backend, frontend, AI, ML, or founding engineers in Mumbai/Pune with 0-3 years of experience. • **Strong Signals (Select):** Side projects, “founder” or “building” in bio, startup internships, hackathons, open-source commits. • **Weak Signals (Filter Out):** Placement prep / corporate job-seekers.	Direct connection requests with zero pitch bypass defensive commercial filters. Initiating conversations around an acute, technical problem statement signals high competency.	The founder sends connection requests containing a technical diagnostic question about their engineering work. If the candidate engages with the technical query, the founder invites them to join the private WhatsApp community.
7. Discord Builder Community Infiltration (Priority 7 / Community Infiltration) *Trigger:* Manual discovery of developer servers via Disboard.	• Active developer-builders participating in developer/builder Discord servers (e.g., local developer chapters, AI hackathon groups, niche technical communities).	Earning trust by offering technical utility/answers first bypasses the “spam advertiser” defense.	The founder joins relevant Discord servers and builds a reputation by answering technical questions. Once they identify active builders showing off projects, they reach out via DM to invite them to the private WhatsApp community.
8. X/Twitter Build-In-Public Prospecting (Priority 8 / Global-to-Local Filter) *Trigger:* Real-time manual search for build-in-public hashtags and keywords.	• Indie builders, hackers, and developers sharing code snippets, product updates, and launch updates on X.	Targeting builders actively seeking public visibility and feedback. Praising their launch builds high organic trust quickly.	The founder engages with the posts of builders who are sharing projects on X/Twitter. After building rapport, the founder sends a DM inviting the local builder to join the private WhatsApp community.
9. Reddit Intent Search & DM Outreach (Priority 9 / Cold Intent Scraping) *Trigger:* Manual search query campaigns targeting intent keywords.	• Early working professionals posting about side projects, SaaS ideas, MVPs, hackathons, or transition anxieties (quitting jobs to build) on developer/startup subreddits. • *Target subreddits:* r/SideProject, r/saas, r/startups, r/cscareerquestions.	Appeals directly to self-identified builders currently seeking validation, feedback, or direction.	The founder provides constructive feedback on relevant Reddit posts regarding side projects or startup ideas. They then send a follow-up DM inviting the author to join the private WhatsApp group for further support.

4.2. The Bayesian Selection Funnel

Candidate discovery (Section 4.1) populates the curated pool in our WhatsApp community holding tank. **The Bayesian Selection Funnel is the engine of institutional selectivity.** It operates as an open, high-conviction pipeline that processes multi-stage application responses through automated LLM screening while offering parallel access to live founder rituals.

4.2.1. Stage 1: Universal Landing Page & Mandatory Account Creation

- **Universal Target URL:** Every external acquisition channel (LinkedIn posts, campus keynotes, Scout referrals, hackathon DMs, Discord communities, Reddit threads, and WhatsApp holding tanks) directs candidates to **one single landing page** (`/programs`).
- **Strict Anti-Leakage Infrastructure:** The Bayes Handbook (`handbook.md`) is **never distributed directly via WhatsApp, DMs, or public attachments**. It is the institution’s primary trust-building asset and the beginning of the admissions journey, not a freely circulated PDF.
- **Mandatory Account Creation:** Accessing the Handbook requires creating a user account (Name, Email Address, Phone/WhatsApp Number). This establishes the candidate’s verified Intent CRM record.
- **Post-Download Nurture Loop:** Downloading the Handbook triggers an automated 3-part WhatsApp nurture sequence (Day 1: Reflection check, Day 3: Founder Briefing invitation, Day 5: Rolling diagnostic interview limit warning) to convert readers into active applicants.

- **The Post-Handbook Conversion Bridge:** After downloading the Handbook, the default primary recommendation presented to the learner is to **attend the next live Founder Briefing**.
- **The Conviction Bridge Function:** While applications remain open continuously, attending **The Founder Briefing** serves as the natural bridge between reading about Bayes and committing to the Fellowship. It builds authentic trust and clarifies curriculum, pricing, and scholarship rules before the candidate submits their application.
- **The Primary Application CTA:** The primary action button on the Programs Page and inside the Handbook portal is: **"Claim Your Founder Seat."**

4.2.2. Stage 2: Multi-Stage Unified Fellowship & Scholarship Application

Clicking **"Claim Your Founder Seat"** opens the comprehensive, multi-step Fellowship Application portal. Candidates can keep this application link open for several days and complete it asynchronously at their own pace across distinct sections:

- **Preventing Premature Self-Rejection:** The application avoids binary credential questions ("Have you raised funding?", "Do you have 3 years of production code?") which create **negative priming**, causing high-potential builders to self-reject. Instead, it uses open-ended, trajectory-focused prompts designed to uncover latent capability:
    - *Section A: Technical Trajectory & Signal Audit:* Open-ended prompts auditing **Obsession** (unprompted technical rabbit holes), **Agency** (resourcefulness when hitting build blocks), and **Ability to Execute** (48-hour shipping vision under full AI leverage).
    - *Section B: Ambition & Origin Essays:* Open-ended reflection prompts (e.g., childhood ambitions, formative building experiences, and personal drive) to assess mental models and grit.
    - *Section C: Fellowship & Scholarship Aid Request:* Financial assistance bracket selection accompanied by a merit prompt: *"Why will your presence elevate the caliber and execution energy of this cohort?"*
- **Draft Auto-Save & Abandonment Recovery:** The application portal automatically saves candidate progress linked to their contact details. If an application remains incomplete after 24 hours, an automated WhatsApp reminder triggers: *"Your Bayes Fellowship Application is saved. Resume your application here."*
- **First-Pass LLM Evaluation Engine:** 100% of submitted multi-stage applications are automatically ingested by an **LLM evaluation prompt inside Intent CRM (Airtable)**. The LLM performs a first-pass analysis, grading responses across signal density, technical depth, and agency. This pre-sorts submissions into High, Medium, and Low signal tiers, drastically reducing founder review time without replacing human judgment.

4.2.3. Stage 3: Parallel Pre-Cohort Rituals & Open Drop-in Sessions

While candidates complete their multi-stage application over several days or await evaluation, they have open, unrestricted access to two weekly live rituals to resolve doubts, clarify Handbook policies, and experience founder proximity:

- **Sunday Orientation Session (The High-Conviction Keynote):** A live 1-hour presentation hosted by the founder every Sunday evening dissecting AI code collapse, building business systems, and founder ambition.
- **Tuesday Founder Briefing (Live Conviction Q&A):** Open group session every Tuesday (7:00 PM to 9:00 PM). Candidates bring personalized questions regarding career trajectories, project ideas, or policy details read in the Handbook (fees, refund terms, scholarship rules).

4.2.4. Stage 4: Founder Due Diligence & 1-on-1 Diagnostic Interview

- **Founder Due Diligence & LLM Calibration:** The founder conducts human due diligence on candidates pre-sorted by the LLM evaluation engine. To prevent false negatives among terse, introverted builders, the founder spot-checks Medium and Low signal tiers, specifically auditing Section A (*Technical Obsession*) before issuing rejections.
- **Pre-Interview Diagnostic Briefing:** Upon scheduling, candidates receive an automated brief: *"This is a 30-minute diagnostic session, not a corporate interview. Come prepared to present a 5-minute technical breakdown of a system you built or a problem you are obsessed with solving."*
- **1-on-1 Founder Diagnostic Interview:** Candidates who pass the founder's due diligence review participate in a 30-to-40 minute diagnostic interview conducted by the founder.
- **Dual Objectives:**
    - *Qualification:* Rigorously vet practical systems capability, resilience, and personal agency.
    - *Closing:* Conduct an authentic critique of their project vision. **The diagnostic interview acts as both the final selection bar and the highest-signal conversion loop.**

4.2.5. Stage 5: Formal Offer Letter, Seat Deposit, and Cohort Onboarding

- **Offer Letter Issuance & Sponsor Alignment:** Successful candidates receive an official Bayes Founder Fellowship Offer Letter detailing cohort placement, scholarship grant details, and net fee breakdown. Offers include an attached **"Sponsor & Parent One-Pager"** outlining the 14-day 100% money-back guarantee, zero-debt policy, and institutional outcomes to eliminate family hesitation within the 48-hour window.
- **The ₹5,000 Seat Confirmation Deposit:** To lock their seat, the candidate must submit a **non-refundable ₹5,000 deposit within 48 hours** of offer issuance, irrespective of their scholarship percentage.
    - *Psychological Function:* Filters out passive applicants, triggers loss aversion, and locks mental commitment.
    - *Credit Toward Tuition:* The ₹5,000 deposit is credited against the candidate's first tuition installment. This keeps the admission promise simple: the fellow pays ₹5,000 to confirm the seat, then the Month 1 invoice is reduced by the same amount.
- **Strict 48-Hour Expiration & Waitlist Protocol:** If the ₹5,000 deposit is not submitted within 48 hours, the offer automatically expires and the seat is released to the **Cohort Waitlist Pool**.

- **Sign & Cohort Transition:** The candidate digitally signs the student terms agreement. Upon deposit confirmation:
  - The student CRM updates status to **Enrolled**.
  - An automated invite link grants immediate access to the private **Cohort 1 Admitted Fellows Channel** (moving them out of the public holding tank).
  - The net Month 1 installment is due by the start of Week 4, before institute-funded retreat travel and stay payments are released.
- **The Zero-Debt Institutional Principle: Bayes Institute explicitly rejects NBFC loan partnerships and debt financing.** A builder should never take on debt for an uncertain startup trajectory. Candidates who cannot afford out-of-pocket tuition apply directly for **Bayes Scholarship Grants**, never student loans.

4.3. The Pre-Engagement Period (Enrolled Fellows Retention Engine)

The pre-engagement period spans the 1 to 3 week window between a candidate submitting their **₹5,000 seat confirmation deposit** and **Cohort Day 1**.

In high-ticket educational fellowships, the waiting void between payment and kickoff is the highest-risk drop-off point. Without deliberate retention engineering, candidates experience buyer's remorse and cold feet. **The pre-engagement period operates on zero founder-teaching overhead, relying on physical identity anchors, emotional self-commitment, social proof, and peer proximity to engineer retention.**

4.3.1. The Admitted Fellow Welcome Kit & Customization (Physical Anchor)

- *Retention Rank:* #**1 (Highest Impact - Physical Anchor & Loss Aversion)**
- *Customization Trigger:* Immediately upon deposit confirmation, the fellow receives an automated Welcome Kit Customization Form (selecting hoodie sizing, delivery address, and custom moniker for laptop stickers).
- *Pre-Engagement Dispatch:* The physical Welcome Kit (heavyweight Bayes hoodie, laptop stickers, printed manifesto notebook, Bayes Passport, and Sealed Commitment Envelope) is dispatched directly during the pre-engagement window. Delivering tangible, premium merchandise creates sensory confirmation of quality and cements belonging well before Day 1.
- *Refund Deductibility Clause:* As codified in the Student Terms Agreement, if a fellow exercises their 14-day 100% money-back guarantee post-Day 1, the net tuition refund deducts the physical merch unit cost (₹2,500) unless returned in pristine, unused condition.

4.3.2. The Bayes Passport (Physical Identity Card)

- *Retention Rank:* #**2 (Identity Anchor & Status Confirmation)**
- *Physical Asset:* Included inside the physical Welcome Kit as an ultra-premium, tactile identity card.
- *Details:* Features the fellow's **Full Name**, **Cohort Number** (e.g., Cohort 1), and unique **Bayesian Identifier** (e.g., *Bayesian #014*).
- *Psychological Function:* Establishes institutional identity, pride, and tangible membership within an elite builder network ("People love identity").

4.3.3. The Sealed Personal Commitment Letter (Emotional Self-Accountability)

- *Retention Rank:* #**3 (Psychological Lock-in & Zero Founder Overhead)**
- *Physical Asset:* Included in the Welcome Kit as a structured, premium prompt card with a wax/foil seal envelope.
- *The Prompt:* The fellow writes a personal letter **not to Bayes, but to themselves**, answering two core questions:
  1. *Why are you joining?*
  2. *What would make these 40 weeks successful?*
- *The Protocol:* The fellow seals the envelope immediately upon unboxing and promises not to unseal it until **Graduation Day**.
- *Retention Function:* Zero founder effort, immense emotional self-accountability, and psychological lock-in.

4.3.4. Enrolled Slack Channel Fellow Spotlights (Peer Caliber Proof)

- *Retention Rank:* #**4 (Social Proof & Cohort Caliber Validation)**
- *Execution:* Enrolled fellows join the `#fellow-spotlights` channel inside the official Slack workspace where daily structured **Fellow Spotlights** are published.
- *Details:* Each spotlight highlights an admitted builder's background, build stack, core problem obsession, and a distinctive, high-signal trait ("something crazy about them"). This continuously demonstrates the exceptional caliber of the cohort to every enrolled member.

4.3.5. Pre-Launch Saturday Coffee Meetups (Regional Peer Chemistry)

- *Retention Rank:* #**5 (Offline Peer Chemistry & Co-Founder Spark)**
- *Execution:* Hosted 2 to 3 days prior to Cohort Day 1 in regional hubs (Mumbai & Pune).
- *Details:* Informal Saturday coffee sessions designed purely for early peer bonding, co-founder chemistry, and informal networking before official curriculum sessions begin.

4.3.6. Asynchronous Cohort Idea Sandbox (Low-Touch Alignment)

- *Retention Rank:* #**6 (Asynchronous Co-Founder Alignment)**

- *Execution:* A dedicated channel (`#idea-sandbox`) inside the Slack workspace where fellows post problem statements, industry pain points, or build concepts they are curious about exploring. Fellows organically comment and align on potential co-founder projects without founder oversight.

4.4. The 40-Week Fellowship

The 40-week fellowship is the core operational phase where enrolled fellows transform from aspiring builders into active founders.

4.4.1. The Weekly Operating Rhythm (The 40-Week Cadence)

The Bayesian journey is a part-time but intensive 40-week chronological sequence delivering **200 guided live hours — 5 hours of live, interactive cohort sessions per week**. Building, selling, and market experimentation happen on top of that, in the hours each fellow owns. The volume of self-directed execution scales with the venture's demands and cannot be prescribed upfront.

Every single week of the 40-week window focuses on a specific operational theme and runs on a strict, unyielding 7-day cadence designed to transition participants from theory to market execution:

Day of Week	Format / Activity	Time Slot	Purpose & Run of Show	Expected Output
Wednesday	Lecture 1: Kickoff & Theory	8:30 PM - 10:00 PM (Live)	Kickoff of the new weekly theme. Introduces the theoretical framework, case studies, and models.	Theory internalized; release of weekly assignment.
Thursday	Self-Paced Work	Flexible (Due by 11:59 PM)	Fellows apply the theory to their specific projects. Graded by the team by Friday afternoon.	Graded weekly assignment.
Friday	Lecture 2: Context & Deep Dive	8:30 PM - 10:00 PM (Live)	Review of Thursday's submissions. Extends the theme with sharper context, advanced case studies, and weekend prep.	Prep for weekend execution.
Saturday & Sunday	Uninterrupted Weekend Execution	Flexible (Self-directed)	Bounded focus on building, selling, running experiments, and market action. Work is submitted by Monday afternoon.	Deployed updates, early sales/metrics.
Monday	The Bayesian Update: Critique & Diagnostic	8:30 PM - 10:30 PM (Live)	Live diagnostic session evaluating the weekend outcomes. Direct critique of fellow products and customer data.	Identification of execution errors and iteration roadmap.
Tuesday	Iteration & Outreach Day	Flexible (Self-directed)	Quiet day for fellows to make product changes based on Monday's critique and run B2B weekday outreach.	Corrected product updates; weekday sales touchpoints.

4.4.2. The 40-Week Curriculum Blueprint

The curriculum follows one continuous venture artifact chain: each week inherits the product, evidence, and decisions created before it. Core concepts such as the Opportunity Thesis, ICP, 10x Wedge, pricing, metrics, and the Bayesian Update deliberately reappear only when the venture has new market evidence that allows a deeper application.

Week #	Weekly Theme	Core Question Answered	Pre-Read Material	Lecture 1 (Kickoff & Theory)	Practice Work	Lecture 2 (Context & Deep Dive)
1	The Asymmetric Bet: Founder Math and the Power Law	Why does startup risk work differently?	• PG Essays ("How to Make Wealth") • Naval ("How to Get Rich") • Thiel Power Law • Marc Andreessen ("How to Get Lucky")	What determines startup outcomes? Why 20-year internet era tech startups generated generational wealth vs traditional firms. Motivating the 3 distributions (Normal, Log-Normal, Power Law), leverage & wealth creation, and luck surface area engineering.	Founder OS Sprint: Write a 1-page Founder OS covering personal purpose, value-creation thesis, protected time budget, risk constraints, and operating rules for the next 40 weeks.	The Founder Operating System (Founder OS): Core startup principles, mental models of elite founders, how to think/act under ambiguity, and what to optimize for (iteration speed, leverage, problem obsession).

Week #	Weekly Theme	Core Question Answered	Pre-Read Material	Lecture 1 (Kickoff & Theory)	Practice Work	Lecture 2 (Context & Deep Dive)
2	The India Opportunity: Where New Demand Is Forming	Where is India creating new demand?	India Market Segmentation & Adoption Curves Primer	India 1-2-3 Opportunity Mapping: Demographic shifts, consumption capacity, digital access, regional trust patterns, tech adoption curves, and 5-year sector-wise startup formation trends.	India Opportunity Sprint: Draft 3 venture hypotheses, map the target India 1/2/3 customer, identify the adoption driver, estimate the realistic revenue ceiling, and choose 1 market for Week 3 cartography.	Intuition vs Scientific Dissection: Why relying on founder gut feeling fails. Case studies of gut-driven failures vs methodical value-chain teardowns (dissecting industry value chains, structural frictions, unit economics).
3	Industry Cartography: Follow the Money	Where does money leak inside an industry?	Bayes Custom Industry Cartography Guide	Industry Cartography & 2D Ecosystem Mapping: Defining industry boundaries, mapping multi-participant ecosystems, money flows, revenue models, cost structures, margins, and profit pools across Indian sectors.	Profit Pool Mapping Sprint: Map one focused sub-sector, trace actors and money flows, identify 3 structural bottlenecks, and choose the most promising profit-pool opportunity to investigate in Week 4.	Multi-Lens Industry Teardowns & Bottleneck Arbitrage: Deconstructing real-world sectors through 4 lenses (Founder, Operator, Investor, Consultant). Analyzing regulations, moats, AI disruption vectors, and failure modes.
4	Ground Truth: Where Work Actually Breaks	Where does the real workflow break?	Razorpay “Fix My Itch” Problem List & Operational Primer	Ground-Level Workflow Mapping & Interview Masterclass: What is a workflow? Mapping ground-level operational flows (healthcare, banking, logistics, D2C), manual workarounds, misaligned incentives, and calculating the “Cost of Doing Nothing”. Masterclass on operator interview tactics (how to ask unvarnished questions without bias).	Operator Reality Sprint: Interview 2 practitioners, reconstruct one 5-step workflow, identify 3 urgent frictions, and quantify the cost of doing nothing for the strongest problem.	YC & VC Problem Pattern Teardowns: Live reverse-engineering of YC 5-year batches & Indian VC portfolio announcements. Mapping ground-truth friction patterns solved by venture-backed startups across sectors.
5	Hunting Grounds: Your Unfair Right to Win	Where do you have the right to win?	Founder-Market Fit & Unfair Advantages Primer	Unfair Advantage & Idea Space Exploration: Spotting your personal unfair advantage (network, domain depth, asymmetric info, risk tolerance, skills) to establish your right to win. Introducing the “Idea Space”: fertile problem lands where failure allows low-rework pivots. Case study: Founder’s personal journey.	Hunting Ground Sprint: Audit personal unfair advantages, select 1 fertile idea space, define the desperate early adopter, and map 3 adjacent pivot paths inside that market.	Problem Urgency & Willingness to Pay: Pinpointing high-value problems inside your idea space. Distinguishing Vitamins vs Painkillers, B2B vs B2C buyer friction, identifying desperate early adopters, analyzing existing workaround costs, and buyer purchase psychology.
6	The Opportunity Thesis: Why This, Why Now	Why this problem, and why now?	Tarpit Ideas & “Why Now?” Inflection Point Framework	Constructing a Rigorous Opportunity Thesis: Asking brutal questions to avoid tarpit ideas. Analyzing market catalysts: Why Now? Technology inflection	Opportunity Thesis Sprint: Write a 1-page thesis with why now, target wedge, falsifiable assumptions, kill criteria, and a Devil’s Advocate revision based	Thesis Interrogation & Validation Feedback Loops: Deconstructing “Devil’s Advocate” interrogation results. Interpreting customer pushback vs genuine pull, refining the

Week #	Weekly Theme	Core Question Answered	Pre-Read Material	Lecture 1 (Kickoff & Theory)	Practice Work	Lecture 2 (Context & Deep Dive)
				points, regulatory shifts, cultural/behavioral changes, paradigm shifts. Constructing falsifiable hypotheses, contrarian vs consensus thinking, initial wedge, and thesis evolution paths.	on evidence gathered so far.	initial wedge based on real-world market response, and killing invalid hypotheses early without emotional attachment.
7	Company Genesis: Name, Wedge and First Market	What company are you actually building?	Company Naming, Domain Acquisition & Brand Architecture Guide	Company Naming, Branding & Functional Architecture: What makes a memorable company name, domain selection strategy, and brand voice. Structuring early company functions (Product, Engineering, Brand, Ops). Evolving the thesis into an operational Spec: defining ICP, GTM distribution, pricing, cold-start tactics, and competitive teardowns.	Company Genesis Sprint: Finalize name/domain, primary ICP, 10x wedge, first distribution tactic, competitor teardown, and founder role map for the first build cycle.	Peter Thiel's 10x Rule & Cold-Start Distribution: Designing the one remarkable feature 10x better than market alternatives. Solving the cold-start problem, leveraging platform piggybacking, competitive moats, and high-efficiency startup ops.
8	Product Instinct: Make the First Use Obvious	How do users reach value fast?	Behavioral UX, Cognitive Load & Time-to-Value Primer	Behavioral UX for Founder Products: Cognitive load, user motivation, trust cues, task completion psychology, onboarding friction, aesthetic usability effect, and time-to-value (TTV) optimization for B2B and B2C workflows.	First-Use Wireframe Sprint: Map the primary user task, produce low-fidelity screens for the 10x feature, audit time-to-value friction, and add onboarding/trust cues that make the first use obvious.	Trust Architecture & Onboarding Mechanics: Designing for comprehension, credibility, perceived effort, progress visibility, and reduced drop-off; converting low-fi wireframes into interactive user flows.
9	Build-Ready Prototype: Test Before You Code	Does the product make sense before code?	Minimum Viable Product (MVP) Anatomy & Scope-Reduction Framework	High-Fidelity Wireframing & Information Architecture: Integrating brand assets (name, logo, palette, aesthetics) into user journey maps. Information & visual hierarchy, interaction design, edge case resolution, critical user paths, and the "One Core Feature" scope-reduction philosophy.	Prototype Test Sprint: Build the high-fidelity prototype, run 3 guerrilla tests with prospective users, fix comprehension/navigation failures, and lock the build-ready product spec.	Guerrilla Usability Deconstruction & Build-Readiness: Deconstructing guerrilla testing observations. Identifying UX navigation bottlenecks, refining interaction design based on live feedback, finalizing visual specs, and declaring 100% build-readiness for engineering sprint.
10	The Build Contract: Turn Vision into Scope	What exactly should be built now?	AI-Assisted Engineering Workflow & MVP Build Contract Guide	Prototype-to-Product Translation: Use the Week 9 prototype and Week 7 ICP/10x Wedge to separate must-ship workflows from later ideas. Introduce repo structure, issue backlogs, technical risk registers, AI prompt context packs,	Build Contract Sprint: Write user stories, acceptance tests, component inventory, data-flow sketch, API surface draft, deferred-scope list, and the Week 11 build backlog.	Architecture Review & Scope Clinic: Mentor critique of build contracts, AI coding prompts, risk registers, and deferred scope. Lock the Week 11 front-end execution plan and define the first landing-page signal to collect during build.

Week #	Weekly Theme	Core Question Answered	Pre-Read Material	Lecture 1 (Kickoff & Theory)	Practice Work	Lecture 2 (Context & Deep Dive)
				acceptance criteria, and build-vs-buy decisions.		
11	The First Surface: Make the Promise Visible	Can the market understand the promise?	Modern Front-End Component Systems & Landing Page Conversion Primer	Component Architecture & Time-to-Value: Turn wireframes into reusable components, responsive layouts, empty/loading/error states, onboarding paths, and landing-page message discipline.	First Surface Sprint: Build the component library, core screens, onboarding skeleton, and live landing page; collect waitlist or demo-request signal from the Week 7 ICP.	Front-End Review & Demand Signal Clinic: Live critique of UI polish, performance, message comprehension, and early landing-page conversion. Use feedback to refine Week 12 data model and auth needs.
12	The Working Core: Data, Auth and Real Workflows	Can the product complete the core job?	Pragmatic Back-End Architecture, Auth & Data Modeling Primer	Data Modeling from User Actions: Derive database schema from Week 11 screens and Week 9 user journeys. Choose the simplest reliable stack, auth model, permissions, environment management, and API boundaries.	Working Core Sprint: Implement auth, database, CRUD/API endpoints, staging integration, smoke tests, and error logs for the product's primary workflow.	Back-End Review & Integration Prep: Code review, latency basics, auth/security edge cases, API error handling, and the Week 13 refactor backlog before full-stack customer review.
13	The Refactor Pause: Clean, Narrow, Prepare	What must be cleaned before users see it?	—	Build Debt & Evidence Review: Review Week 11 demand signal and Week 12 technical progress, inspect backlog debt, update scope based on landing-page/user reactions, and define integration acceptance criteria.	Refactor Pause Sprint: Clear blocking bugs, stabilize components/API, update scope from evidence, document the integration checklist, and book the 2 operator reviews for Week 14.	Integration Readiness Review: Mentor one-on-one code and product checks; lock the two operator/user sessions required in Week 14 and the questions that will test commercial intent.
14	First Contact: Put the MVP in Operator Hands	Would real operators use or pay?	WIP Product Review Script & Commercial Signal Log	Full-Stack Integration Review: Connect core screens, data, auth, and logs into a usable flow. Set the quality bar for a demoable product and prepare unbiased WIP operator reviews.	Operator Signal Sprint: Complete the full-stack MVP, run 2 recorded operator sessions, log usage friction and pricing reaction, and decide the exact fixes before adding new features.	Signal-Led Build Correction: Teardown recordings and code, distinguish UX confusion from weak problem pull, and decide what to fix, cut, or defer before AI/value-layer work.
15	AI as Leverage: Add Intelligence Only Where It Pays	Where should AI create real advantage?	AI Feature Fit, Prompt Reliability & Unit Economics Primer	AI as Workflow Leverage: Map AI opportunities to operator pain, choose model/API/RAG/fallback patterns, define evaluation criteria, latency and token budgets, and set human review boundaries.	AI Leverage Sprint: Add one AI workflow tied to the 10x wedge, measure quality/latency/cost, compare it to the non-AI baseline, and decide whether to keep, defer, or remove it.	AI Reliability & Margin Clinic: Review outputs, prompt drift, hallucination risk, privacy implications, caching/fallbacks, and unit economics. Decide whether the AI feature remains core, optional, or removed.
16	Private Beta Gate: Ready for Real Commitment	Is the beta ready for commitment?	Private Beta Readiness, Payment/LOI & Support Checklist	Beta Readiness & Trust Basics: Core performance, QA, onboarding checklist, analytics events, payment gateway or LOI flow, trial/refund terms, support	Private Beta Gate Sprint: Fix P0 bugs, instrument activation events, set up payment/LOI path and support channel, then invite 5-10 highest-intent prospects into beta.	Beta Gate Review: Mentor review of product stability, support readiness, analytics quality, and commercial path. Lock the Week 17 positioning/pricing test using real beta prospects.

Week #	Weekly Theme	Core Question Answered	Pre-Read Material	Lecture 1 (Kickoff & Theory)	Practice Work	Lecture 2 (Context & Deep Dive)
				channel, and privacy baseline.		
17	The Sales Story: Position, Price, Promise	What promise will buyers believe?	Positioning, Pricing Psychology & Founder-Led Sales Primer	Narrative from Evidence: Revisit the Week 6 Opportunity Thesis, Week 7 ICP, Week 14 operator reactions, and Week 16 beta gate. Translate evidence into category, enemy, promise, proof, pricing frame, and demo storyline.	Sales Story Sprint: Create the 3-minute demo narrative, pricing/proposal page, outreach list, and run 10 real sales conversations to test what buyers believe.	Narrative Debrief & Objection Mapping: Review call notes, objections, pricing reactions, and unclear claims. Tune pitch and demo for Week 18 high-volume outreach.
18	The First Demos: Learn from Live Buyers	Who cares enough to take a demo?	Founder-Led Sales Discovery & Demo Call Playbook	Discovery Before Pitch: Qualify ICP, decision-makers, current workflow/cost, status quo, buying urgency, demo structure, and objection capture.	First Demo Sprint: Execute 100 targeted touches, conduct 5 discovery/demo calls, and log objections by ICP fit, urgency, workflow pain, and price sensitivity.	Demo Teardown & ICP Clarity Clinic: Analyze recordings, no-shows, conversion, and objections. Decide which ICP segment deserves Week 19 paid pilot focus.
19	The Commitment Ask: Paid Pilots and LOIs	Will anyone commit in writing or cash?	Paid Pilot, LOI & B2B/B2C Closing Mechanics Guide	Commitment Architecture: Pilot scope, price, success criteria, buyer/payer/user alignment, proposal structure, LOI vs payment, and ethical closing.	Commitment Ask Sprint: Run 3 high-trust pilot meetings, present scope/price/success criteria, ask for payment or LOI, and document exact decision drivers.	Deal Review & Closing Friction Clinic: Mentor review of proposals, buyer objections, procurement/legal friction, and next steps to close by Week 20.
20	The Commercial Update: Narrow, Pivot or Push	What did the market just teach you?	Market Reality Interrogation & Pivot/Narrow Framework	Pattern Recognition from Sales Data: Synthesize Week 17-19 conversations, distinguish rejection, indifference, false positives, and pull; revisit thesis, ICP, problem urgency, pricing, and product scope.	Commercial Update Sprint: Write a memo covering Week 17-19 metrics, buyer patterns, narrowed ICP, copy/product changes, first commitment status, and the Week 21 delivery plan.	Mid-Fellowship Bayesian Update: Review outreach volume, demo conversion, paid commitments, and pivot logic. Lock Week 21 delivery plan for the customers/prospects who showed strongest pull.
21	Activation: Get Users to First Value	Can users reach first value?	Activation Metrics & White-Glove Onboarding Primer	Onboarding as Product Discovery: First 48 hours, activation threshold, setup checklist, handholding without custom chaos, and measuring time-to-first-value.	Activation Sprint: Onboard committed users, run setup calls, measure activation, and document every support or friction point blocking first value.	Activation Clinic: Teardown onboarding sessions, identify drop-offs, update onboarding/product workflow, and define Week 22 customer outcome target.
22	Outcome Delivery: Make the Promise True	Did you deliver the promised outcome?	Outcome Verification & Customer Interview Guide	Outcome Delivery Discipline: Translate promise into measurable customer result, usage telemetry, qualitative check-ins, priority bug triage, and avoiding custom-feature traps.	Outcome Delivery Sprint: Audit usage, conduct outcome interviews, ship the top 3 recurring fixes, and document before/after value evidence.	Utility Review & Product Decision Clinic: Review telemetry/interviews, separate usability fixes from weak value, and update the roadmap for retention/usage depth in Week 23.
23	Retention: Do They Come Back?	Do users return	Retention Curves, Lifecycle	Retention from Real Usage: Revisit Week 8 onboarding and activation	Retention Sprint: Implement one lifecycle or reactivation loop,	Retention Curve Clinic: Analyze cohort retention, voluntary vs involuntary

Week #	Weekly Theme	Core Question Answered	Pre-Read Material	Lecture 1 (Kickoff & Theory)	Practice Work	Lecture 2 (Context & Deep Dive)
		without being pushed?	Messaging & Activation Pattern Primer	patterns with customer data; define activation-to-retention path, lifecycle email/WhatsApp triggers, reminders, and churn signals.	interview dormant users, track repeat usage, and define what returning behavior proves value.	churn, and repeat-use evidence. Decide what must be instrumented in Week 24 to make decisions.
24	Founder Dashboard: Numbers That Decide	Which metrics should guide decisions?	Analytics Instrumentation, CAC/LTV & Metrics Hygiene Primer	Metrics After Motion: Instrument events tied to acquisition, activation, retention, revenue, and referral; define North Star, payback, gross margin, and data hygiene.	Founder Dashboard Sprint: Instrument acquisition, activation, retention, revenue, and referral events; validate tracking; calculate CAC/payback/gross margin; and publish the weekly decision dashboard.	Metrics Hygiene & Unit Economics Clinic: Strip vanity metrics, audit event accuracy, interpret cohorts, and choose Week 25 operating cadence around the real bottleneck.
25	Operating Rhythm: Turn Learning into Execution	How will the team execute every week?	Founder Operating Cadence, Roadmap & Sales Playbook Guide	Operating System for the Current Stage: Weekly goals, roles, decision logs, product roadmap, sales pipeline reviews, support SOPs, and founder energy management.	Operating Rhythm Sprint: Write the weekly cadence, sales playbook, support checklist, product roadmap, and scorecard rooted in the Week 24 dashboard.	OS Review & Launch Dependency Clinic: Mentor critique of cadences and SOPs; remove premature hiring/scale tasks; lock Week 26 launch backlog and public claims.
26	Launch Gate: Fix, Prove, Prepare	Is the launch claim honest and ready?	—	Pre-Launch Audit & Reflection: Review product stability, customer outcomes, metrics, case proof, sales collateral, and team sustainability.	Launch Gate Sprint: Fix launch blockers, polish onboarding, finalize launch assets, update pricing/proposals, rehearse support response, and complete a public-claims checklist.	Public Reveal Gate: Mentor review of product, infrastructure, support, metrics, and claims. Decide exact Week 27 launch motion and commercial diagnostic criteria.
27	Public Reveal: The Market Sees It	What happens in the open market?	Public Launch & Community Mobilization Playbook	Launch Execution from Evidence: Product Hunt/Hacker News/LinkedIn/community launch options, soft vs hard launch, launch day operations, support coverage, and post-launch signal interpretation.	Public Reveal Sprint: Launch publicly, mobilize the warm network, handle support, and capture inbound leads, usage, conversion, revenue, and failure modes.	Revenue-Positive vs Pre-Revenue Diagnostic: Review launch data and sort teams by evidence: revenue-positive, high-intent pipeline, or weak pull. Each team locks Week 28 sales target from its real state.
28	Warm Pipeline: Convert Trust Before It Cools	Can warm attention become revenue?	Inbound Lead Qualification & Proposal Playbook	Pipeline Triage: Classify inbound/warm leads, choose highest-intent accounts, set daily follow-up cadence, and adapt demo/pricing by segment.	Warm Pipeline Sprint: Triage launch leads, run demos and follow-ups, send proposals to qualified buyers, and close or update every warm opportunity.	Warm Pipeline Review: Analyze lead quality, demo-to-close conversion, pricing objections, and time allocation. Lock net-new outreach needs for Week 29.
29	Cold Demand: Sell Beyond Your Network	Can strangers become pipeline?	Cold Outbound Sequencing & Buyer Access Guide	Cold Outbound Architecture: Build segment-specific lists, multi-touch email/LinkedIn/phone sequences, referral	Cold Demand Sprint: Build a cold list, send 100 targeted touches, book demos, and compare replies by segment, message, and channel.	Cold Outbound Debrief: Review open/reply/demo rates, message-market fit, segment quality, and stalled deals. Decide Week 30

Week #	Weekly Theme	Core Question Answered	Pre-Read Material	Lecture 1 (Kickoff & Theory)	Practice Work	Lecture 2 (Context & Deep Dive)
				hooks, credibility assets, and reply-rate diagnostics.		channel/referral experiments.
30	Borrowed Trust: Referrals, Partners and Channels	Who can lend you trust?	Partnership, Referral & Channel Sales Primer	Borrowed Trust Channels: Identify consultants, agencies, communities, marketplaces, complementary tools, and existing customers as referral nodes; structure incentives without losing control of ICP.	Borrowed Trust Sprint: Run 3 partner/referral conversations, ask customers or prospects for warm introductions, test one referral offer, and compare channel lead quality.	Channel Review: Compare channel leads to inbound/cold leads, inspect incentives and risk, and choose which motion feeds Week 31 revenue lock.
31	Revenue Lock: Price, Terms and Close	Can you close on terms you can deliver?	Pricing Tiers, Contracts, Payment Terms & Basic Startup Legal Guide	Deal Architecture: Pricing tiers, pilot vs subscription terms, payment schedules, scope boundaries, IP, liability, cancellation, renewal, and stage-appropriate support expectations.	Revenue Lock Sprint: Negotiate active deals, turn verbal commitments into signed contracts/payments/LOIs, document MRR/ARR/pipeline, and list every delivery promise made.	Sales Machine Audit: Review total revenue, channel conversion, contract friction, CAC/payback, and commitments made. Prepare Week 32 delivery schedule.
32	Customer Implementation: Deliver Without Custom Chaos	Can you onboard paying customers cleanly?	Implementation Planning & Customer Success Onboarding Guide	Implementation Discipline: Kickoff calls, account provisioning, migration/setup, success criteria, stakeholder map, communication cadence, and custom request boundaries.	Implementation Sprint: Onboard signed accounts, confirm success criteria, run setup sessions, track activation, and flag any custom work that threatens focus.	Implementation Review: Mentor review of onboarding calls, blocker logs, activation data, and custom scope creep. Lock Week 33 outcome verification plan.
33	ROI Proof: Show the Value Created	Can customers prove the ROI?	Customer ROI Measurement & Product Improvement Prioritization Primer	Outcome Evidence: Measure time saved, revenue gained, cost avoided, risk reduced, or workflow completion; prioritize product fixes by customer value and repeatability.	ROI Proof Sprint: Run customer value check-ins, analyze usage logs, ship recurring fixes, and collect quantified outcomes or quotes that show what changed.	ROI and Roadmap Clinic: Review proof quality, customer quotes, feature requests, and roadmap choices. Prepare the account-health and retention system for Week 34.
34	Account Health: Keep Customers Winning	Who is healthy, stuck or at risk?	Account Health, Renewal Risk & Founder-Led Support Primer	Founder-Led Retention Infrastructure: Lightweight customer channels, response expectations, bug triage, incident communication, account health scoring, renewal risk, expansion signals, and reliability patterns from real usage.	Account Health Sprint: Resolve open issues, run health checks, reactivate quiet accounts, map renewal/expansion risks, and identify the customers most likely to become references.	Retention and Account Health Review: Analyze response quality, customer sentiment, usage depth, reliability risk, renewal risk, and expansion signals. Select strongest proof candidates for Week 35.
35	Proof Assets: Case Studies and References	What proof can the market trust?	Case Study, Testimonial & Referenceability Guide	Trust Asset Architecture: ROI interviews, before/after evidence, testimonial ethics, logo permissions, reference calls, and claims that survive diligence.	Proof Assets Sprint: Create 1-2 proof memos or case studies, secure quote/logo/reference permission where available, and update website or sales collateral with defensible claims.	Proof Review: Mentor critique of case studies, claim strength, evidence gaps, and reference network. Prepare Week 36 strategic decision memo.

Week #	Weekly Theme	Core Question Answered	Pre-Read Material	Lecture 1 (Kickoff & Theory)	Practice Work	Lecture 2 (Context & Deep Dive)
36	The Founder Reckoning: Continue, Narrow, Pivot or Close	What should you do with this venture?	Default Alive, Pivot/Narrow & Venture Decision Framework	Strategic Truth Interrogation: Revisit the Week 6 Opportunity Thesis with 35 weeks of build, sales, delivery, revenue, retention, and proof. Evaluate default alive/dead, false PMF, founder-market fit, and opportunity cost.	Founder Reckoning Sprint: Write a 3-page decision memo declaring scale, narrow, pivot, or close, with evidence, counterarguments, next 90 days, and the graduation claim.	Founder Reckoning: One-on-one mentor teardown of decision memo, evidence quality, psychology, and story. Lock Week 37 execution path.
37	Next-Stage Readiness: Scale, Pivot or Close Cleanly	What must the chosen path support?	Reliability, Data Protection & Stage-Appropriate Compliance Checklist	Capacity for the Chosen Path: For scaling/narrowing teams, cover reliability, latency, privacy, DPDP basics, security hygiene, backup/incident plans. For pivot/close teams, cover customer transition, data/export, and evidence-preserving reset.	Readiness Sprint: For scale/narrow, fix reliability and privacy risks; for pivot/close, execute customer transition, data export, and reset plan. Document the operational risks left.	Readiness Review: Mentor review of infrastructure, compliance, customer communication, and operational risk. Feed only defensible claims into Week 38 finance/capital plan.
38	Capital Plan: Runway, Hiring and the Next 12 Months	What can the next 12 months afford?	Unit Economics, Runway, Fundraising & First-Hire Readiness Primer	Capital Allocation from Evidence: Build revenue forecast from actual pipeline/retention, cost structure, gross margin, runway, funding options, grant/angel/VC fit, and first-hire/buy-vs-build decisions.	Capital Plan Sprint: Build the 12-month model, runway scenarios, capital ask or no-raise rationale, and first-hire/contractor plan tied to the Week 36 decision.	Finance and Hiring Review: Mentor teardown of assumptions, burn, margin, milestones, and hiring timing. Prepare Week 39 data room and narrative.
39	Demo Day Story: Evidence Under Fire	Can the evidence survive scrutiny?	Pitch Narrative, Data Room & Diligence Q&A Guide	Narrative from Evidence: Craft the 3-minute story from problem, ICP, product, traction, revenue/LOI, customer proof, decision path, and next milestone. Build data room architecture and Q&A discipline.	Demo Day Story Sprint: Finalize deck, product demo, metrics, customer proof, contracts/LOIs, financial model, decision memo, and a recorded 3-minute pitch.	Full Cohort Dress Rehearsal: Hostile Q&A, claim audit, product demo stress test, and final revision for Demo Day.
40	Graduation Update: The Next Bet	What is the next serious bet?	—	Final Investor/Stakeholder Prep: Logistics, pitch polish, follow-up sequencing, data room permissions, alumni transition, and founder energy management.	Graduation Update Sprint: Confirm data room access, rehearse the final pitch, prepare follow-up messages, and write the venture's next operating cadence.	Demo Day & Graduation: Live presentations to investors/operators/mentors, product demos, alumni induction, and sealed commitment letter reflection.

4.5. The Institutional Events & Masterclass Architecture

The 40-week curriculum operates primarily online, but **certain institutional milestones require physical presence, peer pressure, or specialized external expertise**. The offline retreats and weekly masterclasses form the operational connective tissue that transforms individual builders into a cohesive, battle-tested cohort.

All costs for every offline event (including student travel, basic food, and stay) are 100% covered by the Bayes Institute. Fellows bear zero personal financial friction to participate in physical cohort milestones.

Host Quality & Sourcing SLA (Week 4 Immersion): Host startup acquisition is an institutional KPI owned by the Brand & Growth (B) function and must be locked **4 weeks prior to Cohort Kickoff**. Hosts must be active founders or C-suite operators providing direct, small-group workplace access for 30 fellows split into small field squads. Generic panel discussions, conferences, and promotional office tours are strictly prohibited.

Week #	Event / Ritual Name	Venue & Format	Primary Purpose & Strategic Intent	Core Execution, Activities & Deliverables	Osmotic Learning & Operational Outcome
0 (Pre-Cohort Saturday)	**The Kickoff Coffee**	Local Venue (Mumbai / Pune) *Offline 3-Hour Meetup*	**Form the cohort identity & establish peer trust.** Transform enrolled individuals into a unified team before curriculum pressure begins.	Zero slides, zero pitches, zero formal agenda. Informal self-introductions, spontaneous alignment, cohort rules discussion, and establishing cohort communication channels.	**Establishes baseline psychological safety and cohort chemistry.** 100% funded venue and refreshments. Ownership of peer culture shifts immediately to fellows.
4 (Locked Window)	**The Industry Immersion Retreat**	Startup City (Bangalore / Major Hub) *2–3 Day Offline Field Trip*	**Ground-truth reality calibration & operator friction interrogation.** Learn directly from active founders and operators inside working companies during Week 4 workflow mapping.	Small-group startup field visits (5-6 fellows per squad). Interrogating operators on 18-month unsolved frictions, competitor advantages, and overlooked market gaps. Pitching Week 3-4 cartography theses for direct founder critique.	**Collides abstract thesis assumptions with unvarnished market reality.** Fully organized and 100% funded by institute (travel, stay, food). Hosts pre-locked 4 weeks prior to Kickoff.
16 (End of Week 16)	**Company Reveal Day: First Draft Pitches & Osmotic Learning**	Offline Venue *1-Day Hackathon Showcase & Pitch Crucible*	**First public venture commitment & peer osmotic learning.** Publicly unveil product, thesis, and company identity 24 hours before starting Week 17 sales calls.	Every fellow unveils company name, logo, target ICP, opportunity thesis, and live MVP demo. Transparently narrates what initial assumptions proved wrong during the build.	**Osmotic feedback loop:** Fellows internalize peer mistakes, UX bottlenecks, and blind spots. 100% funded venue and meals. Teardowns lock pitch habits before real customer sales calls.
26	**The Launch Celebration**	Offline Venue *Single Informal Evening (Dinner/Drinks)*	**Milestone acknowledgment & psychological reset.** Recognize completion of the 26-week build phase during the Week 26 Reflection Break.	Informal dinner and cohort reflection. Celebrating the transition from maker to seller carrying a customer-ready MVP. Zero presentations or required deliverables.	**Locks psychological conviction and cohort solidarity.** 100% funded dinner/drinks. Ensures fellows enter public launch (Week 27) with verified peer validation of market readiness.
36	**The Reckoning Fireside & Founder Dinner**	Local Venue (Mumbai / Pune) *Offline Evening Fireside & Dinner*	**Peer psychological support & strategic clarity during venture evaluation.** De-isolate founders evaluating scale, narrow, pivot, or close decisions.	Informal fireside chat with a guest founder who survived a major pivot/reset, followed by cohort dinner. Structured peer discussions on Week 36 3-page decision memos without pitch pressure.	**Eliminates psychological isolation during pivots and hard resets.** 100% funded dinner & venue. Ensures fellows make rational Bayesian updates grounded in evidence rather than ego.
40	**Graduation Ceremony & Demo Day**	Rented Auditorium *Full-Day Dual-Arc Event*	**Commercial venture exposure, institutional felicitation & permanent alumni induction.**	**Arc 1 (Demo Day):** 3-minute live traction narratives & product demos to VCs, angels, and operators, followed by Q&A. **Arc 2 (Graduation):** Felicitation by guest founders, private reading of pre-cohort Sealed Commitment Letters, and degree conferral.	**Opens institutional fundraising and customer channels**, seals 40-week founder transformation, 100% funded auditorium/travel/catering, and transitions fellows into the Bayes Alumni Network.

Week #	Event / Ritual Name	Venue & Format	Primary Purpose & Strategic Intent	Core Execution, Activities & Deliverables	Osmotic Learning & Operational Outcome
Weekly (Mondays 8:30–10:30 PM)	**The Bayesian Update (Masterclass & Diagnostic Clinic)**	Live Virtual Clinic *2-Hour Online Session*	**Stress-test weekly evidence, interrogate commercial decisions, and replace founder sole-authority with domain experts.**	**30–40 min:** Industry expert / co-founder topic presentation. **20 min:** Program founder bridge to cohort context. **30 min:** Fellow product diagnostics & live build teardowns. **20 min:** Open Bayesian Q&A. *(Founder runs full session if guest is absent).*	**Continuous iterative alignment.** Converts raw weekly build/sales execution data into rigorous Bayesian updates. Guest sourcing is managed by the Brand & Growth function.

---

5. Brand & Growth (B)

Brand and growth for the Bayes Institute is not traditional university marketing or performance advertising. **It is signal distribution and founder positioning.** We acquire high-conviction builders by demonstrating unvarnished technical depth, publicly dissecting operational friction, and publishing undeniable fellow evidence.

5.1. Stage 1: Candidate Discovery & Organic Outreach

Task Code	Operational Target & Deliverable	Tactical Execution & Details	Status
5.1.1	**Institutional Visual Identity & Design System**	Finalize core brand identity artifacts: institutional logo, curated dark-mode developer color palette (tailored HSL accents), typography hierarchy (Google Fonts / Inter / Monospace), UI component styling guidelines, and tactile print themes for the web portal and public PDF brochure (`handbook.md`).	[ ]
5.1.2	**“Building Tech in the AI Era” Slide Deck**	Build a 45-minute Keynote deck using dark-mode developer aesthetics. Dedicate 35 minutes to technical latency, LLM architecture, and system performance, and 10 minutes to the Bayes Fellowship thesis.	[ ]
5.1.3	**Regional Tech Meetups & Event Calendar**	Maintain an updated schedule of regional developer meetups, hackathons, and AI meetups across Mumbai and Pune. Print tactile digital WhatsApp QR cards for instant community joining.	[ ]
5.1.4	**Multi-Channel Candidate Outreach Scripts**	Formulate personalized outreach scripts for GitHub committers, LinkedIn indie hackers, Discord builders, and Reddit r/SideProject posters. Draft a professional pitch template for college HODs and Placement Officers.	[ ]
5.1.5	**Founder & Institute Profile Alignment**	Optimize founder and institutional social profiles (LinkedIn, X) around the builder fellowship thesis. Link directly to the gated WhatsApp community announcement channel.	[ ]

5.2. Stage 2: Selection Funnel & Lead Nurturing

Task Code	Operational Target & Deliverable	Tactical Execution & Details	Status
5.2.1	**Handbook Nurture Broadcast Sequence**	Deploy a 3-part automated WhatsApp nurture sequence for leads who downloaded `handbook.md` but have not submitted an application. Emphasize cohort selectivity, market validation urgency, and scholarship caps.	[ ]

5.3. Stage 3: Pre-Engagement & Ecosystem Positioning

Task Code	Operational Target & Deliverable	Tactical Execution & Details	Status
5.3.1	**Public Fellow Spotlights**	Broadcast admitted fellow build backgrounds, technical obsessions, and project links on public channels to reinforce cohort quality and excite incoming builders.	[ ]

5.4. Stage 4: 40-Week Masterclass & Evidence Broadcast

Task Code	Operational Target & Deliverable	Tactical Execution & Details	Status
5.4.1	**Masterclass Guest Speaker Directory**	Map, invite, and pre-book 40 weekly domain experts, technical architects, and co-founders aligned with weekly curriculum themes to anchor Monday Bayesian Updates.	[ ]
5.4.2	**Public Evidence Broadcast Pipeline**	Run a weekly publishing cadence on LinkedIn and X highlighting fellow build milestones, product launches, customer LOIs, and revenue metrics.	[ ]
5.4.3	**B2B Pilot & Buyer Partner Directory**	Build and maintain an institutional directory of friendly B2B corporate buyers, startup founders, and advisory mentors willing to provide pilot opportunities and customer discovery interviews.	[ ]

5.5. Stage 5: Offline Event Sourcing & Host Acquisition

Task Code	Operational Target & Deliverable	Tactical Execution & Details	Status
5.5.1	**Bangalore Host Acquisition SLA (Week 4 Immersion)**	Pre-book and lock 10 to 12 active startup hosts and C-suite founders **4 weeks prior to Cohort Kickoff** for 30 fellows split into 5 to 6 small field squads. Panel discussions and generic office tours are strictly prohibited.	[ ]
5.5.2	**Demo Day Investor Guest List (Week 40)**	Curate and manage direct RSVPs for 50+ vetted angel investors, early-stage VCs, and corporate operators for Arc 1 of Demo Day.	[ ]
5.5.3	**Media & Highlight Production**	Source professional event videographers and photographers to produce high-impact highlight reels for physical cohort retreats.	[ ]

---

6. Academics & Research (A)

Academics at Bayes is not lecture consumption or grade allocation. **It is continuous hypothesis testing and evidence interrogation.** The academic engine designs curriculum frameworks, diagnostic evaluation rubrics, and hostile pitch teardowns that force builders to confront market reality.

6.1. Stage 1: Candidate Discovery & Technical Signal

Task Code	Operational Target & Deliverable	Tactical Execution & Details	Status
6.1.1	**Technical Content Hooks**	Publish engineering teardowns and architecture case studies that attract top 1% technical builders into the discovery funnel.	[ ]

6.2. Stage 2: Selection Funnel & Diagnostic Evaluation

Task Code	Operational Target & Deliverable	Tactical Execution & Details	Status
6.2.1	**Master Academic Handbook (`handbook.md`)**	Maintain and update the public operational handbook detailing the 40-week curriculum, pedagogical principles, and evidence expectations.	[ ]
6.2.2	**40-Week Detailed Curriculum Specification**	Maintain complete module specifications (Opportunity Cartography through Scale) feeding Section 7 of `handbook.md` .	[ ]
6.2.3	**Multi-Section Application Prompt Bank**	Design open-ended candidate evaluation prompts covering Technical Trajectory (Section A), Ambition Essays (Section B), and Scholarship Need (Section C).	[ ]
6.2.4	**Founder Diagnostic Interview Script**	Formulate the 30-minute founder diagnostic questioning brief, evaluation criteria, and automated candidate briefing note.	[ ]

6.3. Stage 3: Pre-Engagement Curriculum Alignment

Task Code	Operational Target & Deliverable	Tactical Execution & Details	Status
6.3.1	**Pre-Cohort Reading & Stack Orientation**	Curate essential foundational readings on customer discovery, PMF signals, and technical stack choices distributed post-enrollment.	[ ]

6.4. Stage 4: 40-Week Curriculum Execution & Diagnostic Rubrics

Task Code	Operational Target & Deliverable	Tactical Execution & Details	Status
6.4.1	**Master Curriculum Asset Repository**	Prepare and maintain complete slide decks, prompt guides, friction mapping templates, wireframe kits, and telemetry checklists for all 40 curriculum weeks.	[ ]
6.4.2	**Weekly Diagnostic Teardown Rubrics**	Formulate evaluation rubrics for Monday Bayesian Update diagnostic sessions, rotating through 30 fellows (~15 venture teams) monthly.	[ ]
6.4.3	**High-Stakes Gate Audit Frameworks**	Maintain rigorous evaluation criteria for Week 14 (Private Beta Gate Checkpoint) and Week 36 (The Founder Reckoning Decision Framework).	[ ]

6.5. Stage 5: Offline Event Pedagogy & Pitch Teardowns

Task Code	Operational Target & Deliverable	Tactical Execution & Details	Status
6.5.1	**Week 4 Operator Interrogation Brief**	Prepare field interview scripts and friction mapping questionnaires for 5 to 6 small-group startup visits during the Bangalore Immersion.	[ ]
6.5.2	**Week 16 Reveal Day Teardown Rubric**	Formulate draft pitch teardown rubrics auditing opportunity thesis, live MVP stability, and assumption updates for cohort build projects.	[ ]
6.5.3	**Week 39-40 Demo Day Story Sprint SOP**	Conduct hostile Q&A dress rehearsals, claim audits, product demo stress tests, and deck polish sessions prior to Demo Day.	[ ]

---

7. Youth & Community (Y)

Youth and Community is the social engine and peer pressure system of the Bayes Institute. **Culture is not enforced by rules; it is transmitted by peer density and shared rituals.** This function manages cohort bonding, accountability pods, physical retreats, and lifelong alumni identity.

7.1. Stage 1: Candidate Discovery & Ecosystem Seeding

Task Code	Operational Target & Deliverable	Tactical Execution & Details	Status
7.1.1	**WhatsApp Community Infrastructure**	Configure the main WhatsApp Community with participant privacy settings (hiding member phone numbers and participant lists).	[ ]
7.1.2	**Automated Welcome Auto-Responder**	Deploy an auto-responder directing new community members immediately to pinned public technical essays and value resources.	[ ]
7.1.3	**Public Value Resource Pinned Index**	Consolidate public tech essays, case studies, and code templates into a single pinned value index.	[ ]
7.1.4	**Student Scouts & College Hacking Subgroups**	Establish campus subgroups (`Bayes @ VJTI`) and recruit active student organizers as Scouts using custom incentive scripts.	[ ]
7.1.5	**Tactile Merch & Uniform Production**	Source local manufacturers in Mumbai/Pune to produce heavyweight black logo hoodies, t-shirts, laptop stickers, and founder presentation uniforms.	[ ]
7.1.6	**Weekly Community Events Setup**	Configure registration and streaming software (Zoom/Meet/Loom) for Sunday Technical Webinars and Tuesday Founder Briefings.	[ ]

7.2. Stage 2: Selection Funnel & Community Rituals

Task Code	Operational Target & Deliverable	Tactical Execution & Details	Status
7.2.1	**Cohort Rituals Schedule & Budgeting**	Define exact operating schedules and event budgets for weekly live keynotes, hackathons, regional meetups, and Evidence Day feeding `handbook.md`.	[ ]
7.2.2	**Post-Deposit Onboarding Workflow**	Automate the transition workflow moving fellows submitting the ₹5,000 deposit out of the public holding tank into the private Cohort 1 Admitted Channel.	[ ]

7.3. Stage 3: Pre-Engagement Retention & Swag Delivery

Task Code	Operational Target & Deliverable	Tactical Execution & Details	Status
7.3.1	**Welcome Kit Sizing & Customization Intake**	Collect fellow hoodie sizes, shipping addresses, and custom sticker monikers via an automated intake form.	[ ]
7.3.2	**Bayes Tactile Passport Identity Card**	Produce ultra-premium tactile identity cards engraved with fellow name, cohort batch, and Bayesian serial number (`#XXX`).	[ ]
7.3.3	**Personal Commitment Letter Prompt**	Design pre-printed prompt cards (“Why are you joining?”, “What defines success?”) for fellows to fill out and return in sealed envelopes.	[ ]
7.3.4	**Fellow Spotlight Publishing Cadence**	Run a daily publishing schedule in Slack `#fellow-spotlights` introducing admitted fellow backgrounds, build stacks, and obsessions.	[ ]
7.3.5	**Regional Pre-Launch Saturday Coffee Meetups**	Organize informal Saturday coffee meetups in Mumbai and Pune 2 to 3 days prior to Cohort Day 1.	[ ]
7.3.6	**Official Slack Workspace Provisioning**	Configure the Cohort 1 Slack Workspace structure (`#announcements` , `#fellow-spotlights` , `#idea-sandbox` , `#general-lounge`).	[ ]

7.4. Stage 4: 40-Week Accountability & Pod Infrastructure

Task Code	Operational Target & Deliverable	Tactical Execution & Details	Status
7.4.1	**Peer Accountability Pod Division**	Divide the 30-fellow cohort into 6 peer accountability pods (5 builders per pod) to track weekly assignment velocity and prevent build burnout.	[ ]
7.4.2	**Sprint Buffer & Reflection Check-Ins**	Facilitate structured check-ins during Reflection Breaks (Weeks 13 and 26) to manage build fatigue and clear backlog items.	[ ]
7.4.3	**Peer Critique & Hostile Review Norms**	Enforce constructive, honest peer review standards during weekly product teardowns and pitch rehearsals.	[ ]

7.5. Stage 5: Offline Events & Retreat Logistics

Task Code	Operational Target & Deliverable	Tactical Execution & Details	Status
7.5.1	**Offline Event Venue & Catering Logistics**	Book and manage venues, catering, and meals for Kickoff Coffee (Week 0), Company Reveal (Week 16), Launch Celebration (Week 26), and Reckoning Dinner (Week 36) for 30 fellows + core team.	[ ]
7.5.2	**Bangalore Travel & Accommodation Logistics**	Book flights, hotel accommodation, and local transport for maximum 30 fellows during the Week 4 Bangalore Immersion (100% institute-funded).	[ ]
7.5.3	**Sealed Commitment Envelope & Graduation Ceremony**	Securely store 30 pre-cohort sealed envelopes, manage the unsealing ceremony at Graduation, and procure felicitation mementos.	[ ]

---

8. Engineering & Technology (E)

Engineering and Technology at Bayes builds internal leverage. **We build systems so founders can focus on builders, not admin.** This function owns the CRM, LLM screening automation, payment workflows, telemetry templates, and event tech.

8.1. Stage 1: Candidate Discovery & Intent Tracking CRM

Task Code	Operational Target & Deliverable	Tactical Execution & Details	Status
8.1.1	**Institutional Core Landing Page & Value Proposition Web System**	Build and deploy the high-conversion web landing page (`/`) establishing the core promise of the Bayes Fellowship. Embed modern developer dark-mode aesthetic, zero-fluff thesis positioning, live performance metrics, and seamless CTAs directing candidates to the `handbook.md` download modal and application engine.	[ ]
8.1.2	**The Intent CRM Infrastructure**	Build an Airtable CRM tracking candidate intent metrics (`Timeline` , `Biggest Blocker` , `Execution History` , `Profile Source` , `Ritual Fit`), GitHub queries, and Scout referrals.	[ ]

8.2. Stage 2: Selection Funnel Infrastructure & LLM Evaluation

Task Code	Operational Target & Deliverable	Tactical Execution & Details	Status
8.2.1	**Gated Web Portal & Programs Page**	Build web infrastructure for `/programs` featuring a gated Handbook download modal, “Claim Your Founder Seat” CTA, and multi-stage application portal.	[ ]
8.2.2	**Automated LLM Candidate Screening Engine**	Deploy an LLM evaluation prompt inside Intent CRM to parse application essays and pre-sort candidates into High, Medium, and Low signal tiers.	[ ]
8.2.3	**Direct Offer Payment Link & UPI Integration**	Embed reusable Razorpay payment links and static Bayes UPI QR code directly inside Offer Letter emails.	[ ]
8.2.4	**Draft Auto-Save & Abandonment Nurture System**	Implement database draft auto-save linked to candidate contact info with automated 24-hour WhatsApp reminders for incomplete applications.	[ ]

8.3. Stage 3: Pre-Engagement Systems & Portal Sync

Task Code	Operational Target & Deliverable	Tactical Execution & Details	Status
8.3.1	**Automated Onboarding & Slack Provisioning**	Trigger automated Slack workspace invitations and sync candidate profile data to the master fellow directory upon deposit confirmation.	[ ]

8.4. Stage 4: 40-Week Learning Portal & Automated Reminders

Task Code	Operational Target & Deliverable	Tactical Execution & Details	Status
8.4.1	**Learning Experience & Submission Portal**	Maintain Airtable/Notion dashboards tracking weekly assignment submissions, build links, demo recordings, and customer call metrics for 30 fellows.	[ ]
8.4.2	**Automated Masterclass & Sprint Notification Reminders**	Deploy automated WhatsApp/email notifications for Monday 8:30 PM masterclasses, Wednesday mid-week check-ins, and Friday midnight submission deadlines.	[ ]
8.4.3	**Fellow Telemetry & Data Room Code Templates**	Provide standardized code snippets for PostHog analytics tracking, Razorpay payment flows, and digital data room setups.	[ ]

8.5. Stage 5: Offline Check-In & Demo Day Data Room Portal

Task Code	Operational Target & Deliverable	Tactical Execution & Details	Status
8.5.1	**Offline Digital Check-In System**	Build a digital QR check-in system for offline events to monitor cohort attendance compliance.	[ ]
8.5.2	**Demo Day Live Stream & Data Room Portal**	Build live stream infrastructure, digital data room links, and investor lead capture portals for Demo Day.	[ ]
8.5.3	**Outstation Travel Preference Portal**	Build a simple form portal for 30 fellows to submit travel preferences for 100% institute-funded flights and stay.	[ ]

---

9. Strategy & Operations (S)

Strategy and Operations guarantees institutional endurance. **We enforce unit economics, legal clarity, and strict operational boundaries.** This function manages cost floors, tuition billing, scholarship caps, teaching hour budgets, and compliance contracts.

9.1. Stage 1: Candidate Discovery Operations & Scout Budget

Task Code	Operational Target & Deliverable	Tactical Execution & Details	Status
9.1.1	**Scout Incentive & Compliance Rules**	Define Scout reward payouts, merch allocation rules, and outreach compliance guidelines.	[ ]

9.2. Stage 2: Selection Funnel & Unit Economics Controls

Task Code	Operational Target & Deliverable	Tactical Execution & Details	Status
9.2.1	**Per-Fellow Cost Floor & Scholarship Calculator**	Calculate per-student operational cost floors (derived from retreat budgets + tech infrastructure). Cap maximum scholarship percentage so net fee collected never drops below cost floor.	[ ]
9.2.2	**Formal Offer Letter & Placement Terms**	Draft official digital offer letters detailing cohort placement, scholarship grant details, net fee breakdown, and strict 48-hour payment window.	[ ]
9.2.3	**Student Terms & Conditions Agreement**	Draft digital enrollment contracts covering IP rights, code of conduct, refund policy, and tuition payment terms.	[ ]
9.2.4	**Deposit & Scholarship Financial Ledger**	Maintain an accounting sheet tracking ₹5,000 seat deposits, tuition deductions, scholarship allocations, and 48-hour expiration clocks.	[ ]

9.3. Stage 3: Pre-Engagement Procurement & Legal Codification

Task Code	Operational Target & Deliverable	Tactical Execution & Details	Status
9.3.1	**Welcome Kit Procurement Orders**	Finalize vendor purchase orders for Bayes hoodies, stickers, notebooks, Passport cards, and commitment cards.	[ ]
9.3.2	**Welcome Kit Courier Dispatch Pipeline**	Establish a courier dispatch pipeline sending customized kits immediately post-deposit confirmation.	[ ]
9.3.3	**Merch Refund Deductibility Codification**	Codify ₹2,500 merch unit cost deduction in Student Terms Agreement for 14-day refund execution.	[ ]

9.4. Stage 4: 40-Week Live Hours Audit & Tuition Invoicing

Task Code	Operational Target & Deliverable	Tactical Execution & Details	Status
9.4.1	**200 Live Hours Teaching Budget Audit**	Audit weekly live instruction hours (5 hrs/week) to enforce the strict 200 guided hours ceiling without schedule creep.	[ ]
9.4.2	**Tuition Billing & Invoicing Cadence**	Manage tuition invoicing for up to 30 enrolled fellows: ₹5,000 deposit credited against the first installment, one ₹36,665 first net installment, and five ₹41,667 subsequent installments. Track scholarship grant accounting.	[ ]
9.4.3	**Legal, IP & Compliance Templates**	Provide stage-appropriate legal templates for fellows (non-binding LOIs, privacy terms, DPDP compliance checklists).	[ ]

9.5. Stage 5: Offline Event Financial P&L & Lease Contracts

Task Code	Operational Target & Deliverable	Tactical Execution & Details	Status
9.5.1	**Offline Event Budget & P&L Audit**	Track all event expenses for a 30-fellow cohort against unit economics to guarantee 100% institute funding (travel, food, stay) without cost overruns.	[ ]
9.5.2	**Venue Lease Contracts & Insurance**	Secure auditorium lease contracts, liability insurance, and AV equipment for Week 40 Graduation & Demo Day (30 graduating fellows + guests).	[ ]
9.5.3	**Offline Attendance Commitment Enforcement**	Enforce signed offline attendance commitment contracts signed at Kickoff Coffee, managing forfeiture policies for unexcused absences.	[ ]

---

10. Financial Mechanics & Cash Flow Ledger

This section is the rough Cohort 1 operating model, not a tax opinion. It assumes a **30-fellow batch**, a **₹0 opening bank balance**, and a conservative baseline in which **60% of the cohort receives a 50% scholarship**. That means **12 fellows pay ₹2,50,000**, **18 fellows pay ₹1,25,000**, and the blended average realized fee is **₹1,75,000 per fellow**.

10.1. Master Cohort Cash-Flow Calculation

The master view starts with the cohort assumptions, then the bank-style ledger. The table separates credit, debit, per-fellow calculation, purpose, and closing balance so the assumptions remain visible.

Baseline Assumption	Per Fellow	Cohort Math	Cohort Total
Full-fee fellows	₹2,50,000	12 fellows x ₹2,50,000	₹30,00,000
50% scholarship fellows	₹1,25,000	18 fellows x ₹1,25,000	₹22,50,000
Blended fee collected	**₹1,75,000**	30 fellows x ₹1,75,000	**₹52,50,000**
Delivery cost ceiling	-₹75,000	30 fellows x ₹75,000	-₹22,50,000
Operating surplus before tax/draw	**₹1,00,000**	30 fellows x ₹1,00,000	**₹30,00,000**

Week	Credit	Debit	Calculation Per Fellow	Purpose	Closing Balance
0	₹1,50,000	-₹1,08,540	Credit: 30 x ₹5,000. Debit: 30 x ₹2,500 kit + 30 x ₹1,000 coffee + ₹3,540 gateway.	Seat deposits; welcome kits; kickoff coffee; deposit gateway fee.	**₹41,460**
1	₹0	-₹15,000	Debit: ₹500/fellow setup budget.	Initial CRM, Zoom, Slack, domain, billing setup.	**₹26,460**
2-3	₹0	₹0	No planned cash movement.	Carry-forward weeks.	**₹26,460**

Week	Credit	Debit	Calculation Per Fellow	Purpose	Closing Balance
4	₹7,25,010	-₹6,77,110	Credit: 12 x ₹36,665 + 18 x ₹15,835. Debit: 30 x ₹20,000 immersion + 30 x ₹2,000 live ops + ₹17,110 gateway.	First net installment; Bangalore immersion; live ops; gateway fee.	**₹74,360**
5-7	₹0	₹0	No planned cash movement.	Carry-forward weeks.	**₹74,360**
8	₹8,74,998	-₹80,650	Credit: 12 x ₹41,667 + 18 x ₹20,833. Debit: 30 x ₹2,000 live ops + ₹20,650 gateway.	Installment 2; live ops; gateway fee.	**₹8,68,708**
9-11	₹0	₹0	No planned cash movement.	Carry-forward weeks.	**₹8,68,708**
12	₹8,74,998	-₹1,20,650	Credit: 12 x ₹41,667 + 18 x ₹20,833. Debit: 30 x ₹2,000 live ops + ₹40,000 legal/accounting + ₹20,650 gateway.	Installment 3; live ops; legal/accounting tranche; gateway fee.	**₹16,23,056**
13-15	₹0	₹0	No planned cash movement.	Carry-forward weeks.	**₹16,23,056**
16	₹8,74,998	-₹1,95,650	Credit: 12 x ₹41,667 + 18 x ₹20,833. Debit: 30 x ₹2,500 Reveal Day + 30 x ₹2,000 live ops + ₹40,000 assets + ₹20,650 gateway.	Installment 4; Reveal Day; live ops; reveal assets; gateway fee.	**₹23,02,404**
17-19	₹0	₹0	Reserve lock: ₹9,00,000 = ₹30,000/fellow.	Lock reserve; usable cash becomes ₹14,02,404.	**₹23,02,404**
20	₹8,74,998	-₹1,20,650	Credit: 12 x ₹41,667 + 18 x ₹20,833. Debit: 30 x ₹2,000 live ops + ₹40,000 compliance + ₹20,650 gateway.	Installment 5; live ops; compliance tranche; gateway fee.	**₹30,56,752**
21-23	₹0	₹0	No planned cash movement.	Carry-forward weeks.	**₹30,56,752**
24	₹8,74,998	-₹1,20,650	Credit: 12 x ₹41,667 + 18 x ₹20,833. Debit: 30 x ₹2,000 live ops + ₹40,000 compliance + ₹20,650 gateway.	Final installment; live ops; compliance tranche; gateway fee.	**₹38,11,100**
25	₹0	₹0	No planned cash movement.	Carry-forward week.	**₹38,11,100**
26	₹0	-₹85,000	Debit: 30 x ₹1,500 dinner + ₹40,000 launch assets.	Launch dinner and launch assets.	**₹37,26,100**
27	₹0	₹0	No planned cash movement.	Carry-forward week.	**₹37,26,100**
28	₹0	-₹60,000	Debit: 30 x ₹2,000 live ops.	Weeks 25-28 live ops.	**₹36,66,100**
29-31	₹0	₹0	No planned cash movement.	Carry-forward weeks.	**₹36,66,100**
32	₹0	-₹60,000	Debit: 30 x ₹2,000 live ops.	Weeks 29-32 live ops.	**₹36,06,100**
33-35	₹0	₹0	No planned cash movement.	Carry-forward weeks.	**₹36,06,100**
36	₹0	-₹1,48,000	Debit: 30 x ₹1,500 dinner + 30 x ₹2,000 live ops + ₹43,000 Demo Day prep.	Reckoning dinner; live ops; Demo Day prep assets.	**₹34,58,100**
37-39	₹0	₹0	No planned cash movement.	Carry-forward weeks.	**₹34,58,100**
40	₹0	-₹4,58,100	Debit: 30 x ₹10,000 Demo Day + ₹45,000 final ops/collateral + ₹1,13,100 buffer.	Demo Day; final live ops/collateral; unallocated delivery buffer.	**₹30,00,000**

Payment math: Full-fee fellow = ₹5,000 deposit + ₹36,665 first net installment + 5 x ₹41,667 = **₹2,50,000**. Scholarship fellow = ₹5,000 deposit + ₹15,835 first net installment + 5 x ₹20,833 = **₹1,25,000**.

Week 4 cash gate: Release Bangalore bookings only after at least **28/30 fellows** have paid the net first installment. At 27/30, the model is barely positive; 28/30 gives a small operating cushion.

10.2. Delivery Cost Floor & Unit Economics

The delivery model is deliberately conservative: the batch can spend up to **₹22,50,000**, or **₹75,000 per fellow**, without weakening the scholarship-heavy baseline. Cost cuts are concentrated where quality loss is lowest: premium dinners, fancy venues, overproduced collateral, and avoidable paid-speaker dependence.

Category	Line Item	Batch Budget	% of Blended Revenue	Notes
Revenue	Blended fee collected after scholarships	**₹52,50,000**	**100.0%**	12 full-fee fellows + 18 fellows on 50% scholarship.
Identity & Onboarding	Welcome Kit & Merch	-₹75,000	-1.4%	Hoodie, notebook, Passport/lanyard, stickers, commitment card, packaging, courier, handling.
Identity & Onboarding	Week 0 Kickoff Coffee	-₹30,000	-0.6%	Local cafe/venue minimum spend, coffee, light refreshments.
Offline Experience	Week 4 Bangalore Immersion	**-₹6,00,000**	**-11.4%**	Travel cap, twin-share stay, food, local transport, staff logistics, contingency.
Offline Experience	Week 16 Company Reveal Day	-₹75,000	-1.4%	Partner/co-working venue, sprint room, lunch, basic showcase setup.
Offline Experience	Week 26 Launch Celebration	-₹45,000	-0.9%	Dinner cap; no premium venue or open-ended bar.
Offline Experience	Week 36 Reckoning Dinner	-₹45,000	-0.9%	Founder fireside dinner cap.
Offline Experience	Week 40 Demo Day & Graduation	-₹3,00,000	-5.7%	Partnered venue, lean AV, reception snacks, mementos.
Delivery Operations	Live Ops, Tools, TA & Guest Bucket	-₹6,00,000	-11.4%	Software, live operations, limited TA support, selective paid guest honorariums.
Delivery Operations	Legal, Accounting & Compliance	-₹1,20,000	-2.3%	Student terms, refund templates, IP/LOI templates, accounting, reconciliation.
Delivery Operations	Payment Gateway & Reconciliation Reserve	-₹1,23,900	-2.4%	2.36% gateway/collection cost on ₹52,50,000 blended revenue.
Delivery Operations	Media, Launch Assets & Collateral Buffer	-₹1,23,000	-2.3%	Reveal assets, launch page/media, Demo Day collateral.
Delivery Operations	Program-Level Operating Contingency	-₹1,13,100	-2.2%	Unallocated buffer while staying inside ₹75k/fellow.
Subtotal	**Total Delivery Cost Ceiling**	**-₹22,50,000**	**-42.9%**	Inclusive cap for the full 40-week cohort experience.
Result	**Operating Surplus Before Reserve/Tax**	**₹30,00,000**	**57.1%**	Cash remaining after delivery.
Reserve	Safety Reserve	-₹9,00,000	-17.1%	Refunds, drop-offs, travel overruns, delayed collections.
Result	**Pre-Tax Deployable Surplus**	**₹21,00,000**	**40.0%**	Maximum pool for founder draw, tax provision, retained cash, or additional generosity.

10.3. Tax & Operating Guardrails

The operating ledger above is a cash plan. GST and income-tax treatment must be confirmed by a CA before brochure pricing, invoices, or scholarship letters are finalized.

Guardrail / Scenario	Effect on the Model
Scholarship baseline	60% of students on 50% scholarship is already priced into the model. The average realized fee is **₹1,75,000**, not ₹2,50,000.
Average price sensitivity	Every ₹10,000 drop in average realized fee reduces batch cash by **₹3,00,000**.
Delivery-cost ceiling	Do not allow total delivery spend to cross **₹75,000 per fellow** or **₹22,50,000 per batch**.
Reserve rule	Keep **₹9,00,000** locked after Week 16. Under the current baseline, the model leaves **₹21,00,000** pre-tax deployable surplus after that reserve.

Guardrail / Scenario	Effect on the Model
Fee quoted inclusive of GST, if 18% output GST applies and no input credit is assumed	Blended gross collections remain ₹52,50,000, but effective pre-GST revenue becomes ~₹44,49,153 and GST remittance becomes ~₹8,00,847. After delivery cost and the ₹9,00,000 reserve, remaining pre-tax deployable surplus becomes ~₹12,99,153.
Corporate income tax	Not booked in the operating ledger because it depends on legal entity, allowable deductions, founder salary/draw, scholarships, and final CA treatment.
